Equipment Class	DSS Part 15, Spread Spectrum Transmitter
Rule Part	15.247HOP

Overview

Intermec Technologies Corporation is seeking a Class II Permissive Change authorization of FCC ID: EHARFID915PCC-6. A new antenna (Kathrien 4.4 dBi panel) is being added to the filing. Also, approval is sought for a mobile co-location configuration. Otherwise, the transmitter remains a 1-Watt, 915 MHz FHSS radio operating under FCC rules 47 CFR 15.247. The radio section of the PC Card remains unchanged and continues to operate as originally certified.

A complete report is included showing the radiated spurious emissions when using the new antenna. The margins for compliance are slightly lower than originally granted. The reporting of emissions data is per the FCC rules for Permissive Changes. Antenna specifications and RF safety issues are also addressed within the report.

A second EMC report addresses collocation with a Bluetooth radio module, FCC ID: HN2-C30XX. It shows compliance during simultaneous transmission with the Bluetooth radio in a mobile configuration.

Recommendation

All items have been resolved and completed to my satisfaction; therefore I recommend this application for approval.

Findings	
Specification	Finding
47 Cfr 15.203	Antenna Requirement
Finding	Could not find a description of the unique antenna connector. Also, it was unclear if both the stand-alone and co-located configurations used the same antenna.
Resolution	The client provided an updated cover letter that addresses these items. Also the test reports had already stated, in the Antenna Requirements section, that the IM3 PC Card radio is enclosed within the antenna ray-dome so there is no external RF connector
