SUBJECT: Class II Permissive Change for FCC ID: EJE-EM7355D, Model: EM7355

The product, PCIe wireless WAN card, has been granted by FCC dated 05/06/2013 under FCC ID: EJE-EM7355D. The intension of this application is to enable the modular certified FCC ID: EJE-EM7355D to be integrated in host FUJITSU Notebook/ FCC ID: EJE-WB0086/ Model: T734, TH734. The host has two models; T734 and TH734 which are essentially the same product. The difference between T734 and TH734 is color and target customers. The T734 is for commercial market. The TH734 is for consumer market.

The module installed into host platform mentioned above is electronically and mechanically identical to the original certified module. The Original FCC testing on module under FCC ID: EJE-EM7355D was performed with an antenna of higher gain, and the antenna was connected to the module in an open environment. The current host platform under application uses an antenna of the same type but of lower gain and is installed inside the host platform enclosure. The physical restraints introduced by the host platform should have resulted in equal or lower level of radiated emission. Therefore, additional Radiated emission testing was not necessary.

There is an option of User installing this module. The two way bios-lock feature will be employed in host and the antennas will be pre-installed at the factory in the same locations as reported in this filing
