

Re: FCC ID EK2RC1920C

Applicant: Repeater Technologies Inc

Correspondence Reference Number: 21620

731 Confirmation Number: EA371933

2) Please explain whether this device will be either a mobile or fixed transmitter. Or will the device be capable of both simultaneously. In either case, indicate compliance with the Part 24 EIRP requirements and with the RF safety requirements as appropriate. Indicate the antennas used for mobile operations and indicate the antennas used for fixed operations. These should agree with the manual or corrections will be required.

RESPONSE: The device will be operated in the same manner as a fixed cellular or PCS base station. It does not contain a self-contained antenna; therefore we believe it to be exempt from Part 24 EIRP and RF safety requirements. The antennas utilized with the repeater are determined by the end customer, and installed on free standing towers and are not supplied with the unit. A Letter and a revised manual have been uploaded per your e-mail request, clarifying the use of the repeater.

1) Photo's of both sides of all circuit boards. Please label the RF board.

RESPONSE: The digital photographs with descriptions have been uploaded as requested. Photos provided by Frank Bidwell (fbidwell@repeaters.com).
