Federal Communications Commission  
7435 Oakland Mills Road  
Columbia, MD 21046

To whom it may concern:

Itron, Inc. hereby requests a Permissive Change Class II of the radio equipment certification for the Itron Mobile Radio product certification number, FCC ID: EO9IMRD. This product differs from the originally approved product in the following manner:

- (a) Associated digital circuitry – The value of three passive components (one resistor and two capacitors) on the 915MHz transceiver loop filter were changed to widen the filter bandwidth. There are no changes to RF or other associated digital circuitry.
- (b) Functional capabilities – A new 915 MHz FSK modulation with 150kbps data rate and 50-channel hopping is added to the two modulations already certified. This mode is enabled through a product firmware update that will apply to only the models covered by this certification. All current functionality is unchanged.
- (c) Antenna Characteristics – There are no changes to antenna characteristics.
- (d) Cosmetic differences – There are no changes to the cosmetic appearance of the product.
- (e) Other(?) – There are no other changes.

I do attest that the Field strength and/or RF Output readings remained the same or are lower than the originally approved product and that they did not increase, therefore qualifying this product for this application type.

Sincerely,

A handwritten signature in black ink that reads "Jack McPeck". The signature is fluid and cursive, with "Jack" on the top line and "McPeck" on the bottom line.

Jack McPeck  
Sr. Product Development Manager  
Itron, Inc.

Note: Signature is subject to FCC's authorized individual policy KDB 852134; signature must be the named grantee or an authorized delegate.
