

8 Troubleshooting

Problem	Possible Cause(s)	Action
1. No sound	Improper gain	Verify all the sources are on. If the source is a condenser microphone, make sure the mic is plugged into INPUT 1 via XLR and phantom power is enabled in the menu. Inspect the VU meters on LCD or in the app. If there is signal present on the VU meters, increase the input and gain controls to the required level. If there is no signal present on the VU meters, then check the wiring.
	Sources not connected	Check all cables between the source and the loudspeaker with a multimeter or cable tester. Replace any suspect cables with a known good cable.
2. Poor Low-Frequency Response	With SUB menu cross-over frequency activated	If no subwoofers are used with the system, select the OFF position.
	SPEECH mode is active	In the DSP control menu, change the MODE to MUSIC , LIVE , or CLUB . Refer to <i>DSP controls, page 33</i> for more details.
	Input PRESET is not set to FLAT	In the INPUT DSP control menu, change PRESET to FLAT . Refer to <i>INPUT DSP control menu, page 45</i> for more details.
	EQ is active	In the INPUT and DSP control menu, reset all EQs in the low frequencies. Refer to <i>DSP controls, page 33</i> and <i>INPUT DSP control menu, page 45</i> for more details.
3. Intermittent output such as cracking or distortion	Faulty connection	Check all connections at loudspeaker to ensure they are all clean and tight. If the problem persists, check the wiring. See problem 1.
4. Constant noise such as buzzing, hissing or humming	Defective source or other electronic device	If noise is present, but no program material is playing, evaluate each component as necessary to isolate the problem. Most likely there is a break in the signal path.
	Poor system grounding or ground loop	Check and correct the system grounding, as required.
	Input gain is not at a microphone level.	Slowly increase the INPUT LEVEL to engage the microphone pre-amp.
	Mobile device is connected via USB and 3.5 mm jack simultaneously.	Some mobile devices, such as laptops and mobile phones, may introduce ground loops if the loudspeaker is charging the mobile device while simultaneously connected via the 3.5 mm audio input jack. Connect the audio via Bluetooth®, or disconnect from the USB jack.

Problem	Possible Cause(s)	Action
5. No sound produced with microphone connected to INPUT 1 or INPUT 2	Microphone requires phantom power.	Use a dynamic microphone that does not require phantom power. If using a microphone requiring phantom power, connect it to INPUT 1 via the XLR connector and enable phantom power. Refer to <i>INPUT DSP control menu, page 45</i> for more details.
	Input gain is too low	Slowly increase the input gain knob level to engage the microphone pre-amp.
6. Sound is distorted, front LED is OFF , LCD screen LIMIT is ON	Excessive INPUT LEVEL	Reduce the INPUT LEVEL or loudspeaker level knobs to prevent limit.
	Incorrect gain structure or source input (mixing console/preamp) is overdriven	Verify level controls of the source are properly structured by using the VU meter indicator on the LCD screen. If the VU meter bar is solid or the system indicates LIMIT , the input or source level is too high.
7. Microphone produces acoustic feedback when INPUT LEVEL is amplified	Automatic Feedback Suppression is OFF	Enable Automatic Feedback Suppression in the DSP Control menu. Refer to <i>DSP controls, page 33</i> for more details.
	Incorrect gain structure	Reduce the microphone levels at the mixing console or input source. If the microphone is connected directly to the loudspeaker, reduce the INPUT LEVEL on the loudspeaker. Positioning the microphone close to the sound source increases gain-before-feedback. See problem 6.
	MODE is set to MUSIC	Change the MODE to LIVE or SPEECH .
	Microphone position is too close to the front of the loudspeaker	Whenever possible setup the loudspeakers so the microphone is behind them. If using the loudspeaker in a monitor position, aim the loudspeaker to the back of the microphone.
8. DSP control menu is locked	The menu LOCK function has been turned on. A lock symbol displays on the LCD screen.	Press the MASTER VOL knob or input selection soft keys to unlock.
9. QuickSmart Mobile app does not detect the loudspeaker	Enable Bluetooth®	Ensure Bluetooth® is enabled on the loudspeaker. For Android: ensure location services are activated. Remove loudspeaker from iOS/Android in device settings (sometimes called "FORGET"). Restart pairing. Ensure phone/tablet has required OS version and latest updates installed. Ensure the latest QuickSmart Mobile App is installed. Ensure no other phone/tablet is connected to the same loudspeaker.

Problem	Possible Cause(s)	Action
10. No reaction of loudspeaker to user interaction or power cycles	Unforeseen internal operation failure	Remove mains and battery, put battery back into loudspeaker. Or Press and hold soft key for INPUT 1 and INPUT 2 for at least 10 seconds.
If these suggestions do not solve your problem, contact your nearest Electro-Voice dealer or Electro-Voice distributor.

9 Technical data

- 1) Full space measurement using music DSP preset.
- 2) Half-space measurement
- 3) Maximum SPL is measured at 1 m using broadband pink noise at maximum output
- 4) Current rating is 1/8 power
- 5) Maximum output before loudspeaker limit indication, with typical program material
- 6) Moderate output with typical program material

	EVERSE 8	EVERSE 12
Frequency response (-3 dB) ¹ :	60 Hz to 20 kHz	55 Hz to 18 kHz
Frequency range (-10 dB) ² :	50 Hz to 20 kHz	45 Hz to 20 kHz
