Curtis-Straus LLC

Barry Quinlan,

This letter is to accompany a test report written in support of a Class II Permissive Change. VTech is adding a new model number to FCC ID: EW780-5299-B00. The new model is the AT&T 1485 2.4GHz cordless phone base. It contains the same RF module as the VTech 2406 base unit. Added features are: speakerphone, ITAD, and a corded handset. The modification which calls for a Class II Permissive Change is the switch to a common antenna for Tx and Rx, where the 2406 used two separate antennas.

All testing which would normally be performed in preparation for an application for certification has been performed on the AT&T 1485. The product meets the requirements of 47 CFR 15.249. See the accompanying Technical Report and Photographs for more details.

Sincerely,

Michael Buchholz
