

# RADIO FREQUENCY EXPOSURE REPORT

FOR THE

**Device: OpenWay Gas Remote Disconnect  
Model: OWRGRD**

**Report No.: 100666-12**

**Date of issue: January 23, 2018**

**PREPARED FOR:**

Jay Holcomb  
2111 N. Molter Rd  
Liberty Lake WA 99019

**PREPARED BY:**

CKC Laboratories, Inc.  
5046 Sierra Pines Drive  
Mariposa, CA 95338

The test data contained in this report documents the observed testing parameters pertaining to and are relevant for only the sample equipment tested in the agreed upon operational mode(s) and configuration(s) as identified herein. Compliance assessment remains the client's responsibility. This report may not be used to claim product endorsement by A2LA or any government agencies. This test report has been authorized for release under quality control from CKC Laboratories, Inc.

## Equipment Under Test:

CKC Laboratories tested Model: **OWGRD**

Since the time of testing, the manufacturer has chosen to update the model name to:

**Model: OWGRD** Any difference between the names does not affect their EMC characteristics and therefore meets the level of testing equivalent to the tested model.

## Purpose:

To demonstrate compliance with United States, Canada, Australia and/or European Union RF Exposure requirements for Portable equipment (devices used  $\leq 20$ cm from the body) or Mobile equipment (devices used  $> 20$ cm from the body) with power output below exemption levels and Mobile equipment, where Maximum Permissible Exposure (MPE) Calculations apply.

## *Device and Antenna Operating Configuration:*

Device operating at maximum output power with continuous transmission of modulated data.
--

## *Test Procedure:*

This equipment is evaluated in accordance with the guidelines set forth in KDB 447498 & ANSI C95.1 for the US and Health Canada Safety Code 6 & RSS 102 for Canada.
---

## *Other Considerations:*

Report considers stand-alone configurations only. RF Exposure limits are calculated at the mid-point of each operating band.
--

## *Referenced Test Reports:*

The following test reports were referenced in conjunction with this assessment: 100666-9 and 100666-11

**Summary:***Exemptions:*

Equipment demonstrating compliance by portable RF exposure exemption have been evaluated, without further testing, for use under either portable or mobile RF exposure configurations. Additional configurations including collocation or simultaneous transmission with other transmitters (including necessary separation distances) are subject to further assessment. Certain exemption criteria may define specific separation distances. It is assumed that the manufacturer shall design the equipment such that these minimum separation distance is met.

*MPE Calculation Results:*

Equipment demonstrating compliance with MPE calculations have been evaluated, without further testing, for use under mobile RF exposure configurations as identified herein. Additional configurations including collocation or simultaneous transmission with other transmitters (including necessary separation distances) are subject to further assessment. It is assumed that the manufacturer shall design the equipment such that the minimum separation distance of 20cm (or greater, as listed above) is met or that the manufacturer provides a protection guide (e.g. installation instructions) to the end user such that the antenna(s) may be installed in accordance with the manufacturer's instructions in such a manor to maintain the minimum separation distance.

*General Comments:*

The absorption and distribution of Electromagnetic energy in the body is a very complex phenomena that depends on the mass, shape and physiological condition of the body; the orientation of the body with respect to the fields; and, the electrical properties of the body and the environment. Variables that may play a substantial role in possible biological effects are those that characterize the environment (including but not limited to: ambient temperature, air velocity, relative humidity and body insulation); and those that characterize the individual (including but not limited to: age, gender, activity level and existing debilitation or disease). Because innumerable factors may interact to determine specific biological effects of exposure to electromagnetic fields, any protection guide should consider both intended and unintended operational environments and provide guidance for installation and use of the product such that proper separation distances can be maintained. (ANSI C95.1)

## APPENDIX A - RF Exposure Limits

### United States Compliance Requirements (1.1310):

#### *RF Exposure Evaluation Limits Occupational / Controlled Exposure*

Frequency Range (MHz)	Electric Field Strength (V/m)	Magnetic Field Strength (A/m)	Power Density (mW/cm <sup>2</sup> )	Averaging Time (minutes)
0.3-3.0	614	1.63	*(100)	6
3.0-30	1842 / f <sub>MHz</sub>	4.89 / f <sub>MHz</sub>	*(900 / f <sub>MHz</sub> <sup>2</sup> )	6
30-300	61.4	0.163	1	6
300-1500	---	---	f <sub>MHz</sub> / 300	6
1500-100,000	---	---	5.0	6

#### *RF Exposure Evaluation Limits General Population / Uncontrolled Exposure*

Frequency Range (MHz)	Electric Field Strength (V/m)	Magnetic Field Strength (A/m)	Power Density (mW/cm <sup>2</sup> )	Averaging Time (minutes)
0.3-1.34	614	1.63	*(100)	30
1.34-30	824 / f <sub>MHz</sub>	2.19 / f <sub>MHz</sub>	*(180 / f <sub>MHz</sub> <sup>2</sup> )	30
30-300	27.5	0.073	0.2	30
300-1500	---	---	f <sub>MHz</sub> / 1500	30
1500-100,000	---	---	1.0	30

\* Plane wave equivalent power density

Limit is calculated based on the mid-band frequency used in the operating frequency range.

### Exemption Limits for Stand-Alone SAR Evaluation:

In accordance with KDB 447498 D01

Max Output Power at Exemption Limit (mW)		
Frequency (MHz)	$d \leq 50\text{mm}$	$50\text{mm} < d \leq 20\text{cm}$
<100	$\frac{1}{2} \cdot \left( \frac{R \cdot 50}{\sqrt{0.1}} \right) \cdot \left( 1 + \text{LOG} \left( \frac{100}{f_{\text{MHz}}} \right) \right)$	$\left( \frac{R \cdot 50}{\sqrt{0.1}} + (d - 50) \frac{100}{150} \right) \cdot \left( 1 + \text{LOG} \left( \frac{100}{f_{\text{MHz}}} \right) \right)$
100-1500	$\left( \frac{R \cdot d}{\sqrt{f_{\text{GHz}}}} \right)$	$\left( \frac{R \cdot 50}{\sqrt{f_{\text{GHz}}}} + (d - 50) \frac{f_{\text{MHz}}}{150} \right)$
1500-6000		$\left( \frac{R \cdot 50}{\sqrt{f_{\text{GHz}}}} + (d - 50) \cdot 10 \right)$

R is the allowed ratio: 3 for 1-g SAR and 7.5 for 10-g extremity SAR.

d is distance in mm, rounded to the nearest mm.
