Att.: Reviewing Engineer
Federal Communications Commission

RE: FCC ID: EZWBPA105 - Declaration regarding identical HW in different versions of the Tektronix Bluetooth Protocol Analyser.

Digianswer hereby declares that the radio/antenna portion of the Tektronix Bluetooth Protocol Analyser – BPA105 -, is identical to the radio/antenna portion of its predecessor BPA100.

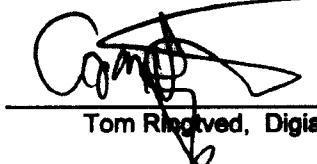

All RF functional blocks, ie. Transceiver IC, VCO, loop filter, and TX chain discretes are exactly the same as in BPA100.

All Baseband software relating to the control of the transceiver is the same.

BPA100 was tested according to FCC part 15.247 rules in September 2000 and was granted certification by FCC 12th February 2001. Test results from these tests, including processing gain test according to 15.247g, will still apply for BPA105.

Sincerely

For Digianswer A/S

Tom Rønved, Digianswer A/S
