

Illustration for Wireless Optical Mouse Model: RF Lynx Mouse; Lynx-MVII

FCC ID: F2Q96C96001M7

Wireless Optical Mouse (Model: RF Lynx Mouse; Lynx-MVII)
is designed to work as a input and pointing device of PC (or Notebook).

When pushing or moving buttons of Mouse, signals go into **ADNS6030** and **MA60H221S** CHIP.

After modulates, signals be emitted the radio frequency at 27.045 MHz through an antenna.

Receiver captures the radio frequency through antenna.

MC3361 CHIP of receiver receives and demodulates the signals, then sends data to **MA606** CHIP.

After processing, data go into PC through USB connector.

Thus, an action of RF MOUSE is completed.
