Federal Communications Commission  
7435 Oakland Mills Rd.  
Columbia, MD 21046

Dear Examiner:

This application is one of two required for **FCC ID: FBR-RSPDL800B**, an improved version of a previously approved product with **FCC ID: FBR-RSPDL800A**. The two applications are as follows: one is for Part 15 Subpart B and C and one is for Part 74. It is the same product in appearance and functionality as the previously approved product but there have been circuitry changes internally for product improvement. These changes in the Part 15 applicable parts of the device involve using new RF components and synthesizer technology to provide multi-channel capability (same frequencies used as the previous product) and to reduce cost. Performance is the same as with the previous design for compatibility with older systems. The Part 74 (wireless microphone aspect of the product) circuits have not been changed but because of change of the FCC ID required for the Part 15 redesign, a new application is submitted.

The product has been re-tested by Elite Electronic Engineering Company to confirm ongoing compliance. Documents showing the new schematic and circuit board appearance as well as all other relevant documents are supplied with this application.

Sincerely,

A handwritten signature in black ink that reads "Harry Derks".

Harry Derks  
Manager of Electronics Engineering  
Fleetwood Group Inc.
