

EMI TEST REPORT

JQA APPLICATION NO. : 400-40297
Model No. : CMP-10BT
Type of Equipment : Mobile Thermal Printer (incorporated with Bluetooth)
Regulations Applied : CFR 47 FCC Rules and Regulations Part 15
FCC ID : FNECMP-10BT
Applicant : Japan CBM Corporation
Address : 5-68-10, Nakano, Nakano-ku, Tokyo, 164-0001 Japan
Manufacturer : COSTECH Inc
Address : FL1 702-1, Ih-dong, Sangrog-gu, Ansan-city,
Gyunggi-do, Korea
Received date of EUT : July 9, 2004
Final Judgment : **Passed**

Test results in this report are obtained in use of equipment that is traceable to National Institute of Advanced Industrial Science and Technology (AIST) of Japan and National Institute of Information and Communications Technology (NICT) of Japan.

The test results only respond to the tested sample. This report should not be reproduced except in full, without the written approval of JQA EMC Engineering Dept. Testing Div.

1 DOCUMENTATION

1.1 TEST REGULATION

FCC Rules and Regulations Part 15 Subpart B and Subpart C

Test procedure :

The tests were performed with reference to the FCC Public Notice DA 00-705, released March 30, 2000. The test set-up was made in accordance to the general provisions of ANSIC63.4-2001.

1.2 GENERAL INFORMATION

1.2.1 Test facility :

1) Test Facility located at EMC Engineering Dept. Testing Div. :

- No.2 and 3 Anechoic Chambers(3 meters Site).
- Shielded Enclosure.

Expiration date of FCC test facility filing : May 27, 2005

2) EMC Engineering Dept. Testing Div. is recognized under the National Voluntary Laboratory accreditation Program for satisfactory compliance established in title 15, Part 285 Code of Federal Regulations.

NVLAP Lab Code : 200189-0 (Effective through : June 30, 2005)

1.2.2 Description of the Equipment Under Test (EUT) :

1) Type of Equipment	: Mobile Thermal Printer (incorporated with Bluetooth)
2) Product Type	: Pre-production
3) Category	: Spread Spectrum Transmitter(FHSS)
4) EUT Authorization	: Certification
5) FCC ID	: FNECMP-10BT
6) Trade Name	: Japan CBM Corporation
7) Model No.	: CMP-10BT
8) Operating Frequency Range	: 2402 MHz - 2480 MHz
9) Highest Frequency Used in the EUT	: 2480 MHz
10) RF Output Power	: +1.64 dBm (measured value)
11) Serial No.	: None
12) Date of Manufacture	: -
13) Power Rating	: DC 7.4V (Li-ion Battery)
14) EUT Grounding	: None

1.2.3 Definitions for symbols used in this test report :

x - indicates that the listed condition, standard or equipment is applicable for this report.

— - indicates that the listed condition, standard or equipment is not applicable for this report.

1.3 TEST CONDITION**1.3.1 The measurement of Channel Separation**

x - was performed.
 - was not applicable.

Used test instruments :

Type	Number of test instruments (Refer to Appendix)
Test Receiver	TR07
Spectrum Analyzer	N/A
Cable	CA11
Attenuator	AU18
Antenna	N/A

1.3.2 The measurement of Minimum Hopping Channel

x - was performed.
 - was not applicable.

Used test instruments :

Type	Number of test instruments (Refer to Appendix)
Test Receiver	TR07
Spectrum Analyzer	N/A
Cable	CA11
Attenuator	AU18
Antenna	N/A

1.3.3 The measurement of Occupied Bandwidth

x - was performed.
 - was not applicable.

Used test instruments :

Type	Number of test instruments (Refer to Appendix)
Test Receiver	TR07
Spectrum Analyzer	N/A
Cable	CA11
Attenuator	AU18
Antenna	N/A

1.3.4 The measurement of Average Time of Occupancyx - was performed. - was not applicable.**Used test instruments :**

Type	Number of test instruments (Refer to Appendix)
Test Receiver	TR07
Spectrum Analyzer	N/A
Cable	CA11
Attenuator	AU18
Antenna	N/A

1.3.5 The measurement of Peak Output Power and Density (Conduction)x - was performed. - was not applicable.**Used test instruments :**

Type	Number of test instruments (Refer to Appendix)
Test Receiver	TR07
Spectrum Analyzer	N/A
Cable	CA11
Attenuator	AU18
Antenna	N/A
Power Meter	AU03
Power Sensor	AU04
Signal Generator	SG03

1.3.6 The measurement of Peak Output Power and Density (Radiation)

x - was performed in the following test site.
 - was not applicable.

Test location :

Safety & EMC Center EMC Engineering Dept. Testing Div.
21-25, Kinuta 1-chome, Setagaya-ku, Tokyo 157-8573, Japan

x - No. 2 site (3 meters)
 - No. 3 site (3 meters)

Validation of Site Attenuation :

- 1) Last Confirmed Date : N/A
- 2) Interval : N/A

Used test instruments :

Type	Number of test instruments (Refer to Appendix)
Test Receiver	TR07
Spectrum Analyzer	N/A
Cable	CA12, CA13
Attenuator	N/A
Antenna	AN10, AN11
Power Meter	AU03
Power Sensor	AU04
Signal Generator	SG03

1.3.7 The measurement of Spurious Emissions (Conduction)x - was performed. - was not applicable.**Used test instruments :**

Type	Number of test instruments (Refer to Appendix)
Test Receiver	TR07
Spectrum Analyzer	N/A
Cable	CA11
Attenuator	N/A

1.3.8 The measurement of Spurious Emissions (Radiation)(9 kHz - 30 MHz)x - was performed in the following test site. - was not applicable.**Test location :**

Safety & EMC Center EMC Engineering Dept. Testing Div.
21-25, Kinuta 1-chome, Setagaya-ku, Tokyo 157-8573, Japan

x - Anechoic Chamber No. 2 (3 meters) - Anechoic Chamber No. 3 (3 meters)**Validation of Site Attenuation :**

1) Last Confirmed Date : N/A

2) Interval : N/A

Used test instruments :

Type	Number of test instruments (Refer to Appendix)
Test Receiver	TR07
Cable	CA06
Antenna	AN01

1.3.9 The measurement of Spurious Emissions (Radiation) (30 MHz - 1000 MHz)

x - was performed in the following test site.
 - was not applicable.

Test location :

Safety & EMC Center EMC Engineering Dept. Testing Div.
21-25, Kinuta 1-chome, Setagaya-ku, Tokyo 157-8573, Japan

x - Anechoic Chamber No. 2 (3 meters)
 - Anechoic Chamber No. 3 (3 meters)

Validation of Site Attenuation :

1) Last Confirmed Date :March, 2004
2) Interval :1 year

Used test instruments :

Type	Number of test instruments (Refer to Appendix)
Test Receiver	TR05
Cable	CA01
Antenna	AN06, AN08
RF Amplifier	N/A

1.3.10 The measurement of Spurious Emissions (Radiation) (Above 1000 MHz)

x - was performed in the following test site.
 - was not applicable.

Test location :

Safety & EMC Center EMC Engineering Dept. Testing Div.
21-25, Kinuta 1-chome, Setagaya-ku, Tokyo 157-8573, Japan

x - No. 2 site (3 meters)
 - No. 3 site (3 meters)

Validation of Site Attenuation :

- 1) Last Confirmed Date :March, 2004
- 2) Interval :1 year

Used test instruments :

Type	Number of test instruments (Refer to Appendix)
Test Receiver	TR07
Spectrum Analyzer	N/A
Cable	CA11, CA12, CA13
Antenna	AN10, AN12
RF Amplifier	AM09
Band Reject Filter	AU16
High Pass Filter	AU17

1.3.11 The measurement of AC Power Line Conducted Emissions

 - was performed in the following test site.
x - was not applicable.

Test location :

Safety & EMC Center EMC Engineering Dept. Testing Div.
21-25, Kinuta 1-chome, Setagaya-ku, Tokyo 157-8573, Japan

 - Shielded Enclosure
 - Anechoic Chamber No. 2 (portable Type)

Used test instruments :

Type	Number of test instruments (Refer to Appendix)
Test Receiver	N/A
Spectrum Analyzer	N/A
Cable	N/A
AMN (for EUT)	N/A
AMN (for Peripheral)	N/A
Termination	N/A

1.4 EUT MODIFICATION / Deviation from Standard

1.4.1 EUT MODIFICATION

- No modifications were conducted by JQA to achieve compliance to Class B levels.
- To achieve compliance to Class B levels, the following changes were made by JQA during the compliance test.

The modifications will be implemented in all production models of this equipment.

Applicant :

Date :

1.6 SUMMARY**General Remarks :**

The EUT was tested according to the requirements of FCC Rules and Regulations Part 15 Subpart B and Subpart C under the test configuration, as shown in clause 1.7 to 1.10.

The conclusion for the test items which are required by the applied regulation is indicated under the final judgment.

Final Judgment :

The "as received" sample;

- x - fulfill the test requirements of the regulation mentioned on clause 1.1.
- fulfill the test requirements of the regulation mentioned on clause 1.1, but with certain qualifications.
- doesn't fulfill the test regulation mentioned on clause 1.1.

Begin of testing : July 10, 2004

End of testing : July 21, 2004

Approved by:

Masaaki Takahashi
Senior Manager
JQA EMC Engineering Dept.

Issued by:

Shigeru Osawa
Assistant Manager
JQA EMC Engineering Dept.

1.7 TEST CONFIGURATION / OPERATION OF EUT**1.7.1 Test Configuration****The equipment under test (EUT) consists of :**

Symbol	Item	Manufacturer	Model No.	FCC ID	Serial No.
A	Mobile Thermal Printer	COSTECH Inc	CMP-10BT	FNECMP-10BT	-

The measurement was carried out with the following support equipment connected :
In the test, any support equipment was not connected to the EUT.**Type of Cable :**

In the test, any I/F cable was not connected to the EUT.

1.7.2 Operating condition

Power supply Voltage : 7.4 VDC(Battery)

The tests have been carried out the following mode.

- 1) TX mode (2403 MHz)
- 2) TX mode (2441 MHz)
- 3) TX mode (2480 MHz)
- 4) Hopping ON mode
- 5) Hopping OFF mode
- 6) RX mode

1.7.3 Generating and Operating frequency of EUT

Clock part : 40MHz, 3.6864 MHz

Bluetooth Part : 32 MHz and 2402 MHz to 2480 MHz

1.8 EUT ARRANGEMENT (DRAWINGS)

1.9 PRELIMINARY TEST AND TEST-SETUP (DRAWINGS)

1.9.1 Channel Separation

The EUT have its hopping function enabled.

Use the following spectrum analyzer settings:

Span = wide enough to capture the peaks of two adjacent channels

Resolution (or IF) Bandwidth (RBW) \geq 1% of the span

Video (or Average) Bandwidth (VBW) \geq RBW

Sweep = auto

Detector function = peak

Trace = max hold

Allow the trace to stabilize. Use the marker-delta function to determine the separation between the peaks of the adjacent channels.

1.9.2 Minimum Hopping Channel

The EUT have its hopping function enabled.

Use the following spectrum analyzer settings:

Span = the frequency band of operation

RBW \geq 1% of the span

VBW \geq RBW

Sweep = auto

Detector function = peak

Trace = max hold

Allow the trace to stabilize. It may prove necessary to break the span up to sections, in order to clearly show all of the hopping frequencies.

Measurement setup is same as sub-clause 1.9.1.

1.9.3 Occupied Bandwidth

Use the following spectrum analyzer settings:

Span = approximately 2 to 3 times the 6 dB or 20 dB bandwidth, centered on a channel

RBW \geq 1% of the 6 dB or 20 dB bandwidth

VBW \geq RBW

Sweep = auto

Detector function = peak

Trace = max hold

The EUT should be transmitting at its maximum data rate. Allow the trace to stabilize.

Use the marker-to-peak function to set the marker to the peak of the emission. Use the marker-delta function to measure 6 dB or 20 dB down one side of the emission. Reset the marker-delta function, and move the marker to the other side of the emission, until it is (as close as possible to) even with the reference marker level. The marker-delta reading at this point is the 6 dB or 20 dB bandwidth of the emission. If this value varies with different modes of operation (e.g., data rate, modulation format, etc.), repeat this test for each variation.

Measurement setup is same as sub-clause 1.9.1.

1.9.4 Average Time of Occupancy

The EUT must have its hopping function enabled.

Use the following spectrum analyzer settings:

Span = zero span, centered on a hopping channel

RBW \leq Channel Separation

VBW \geq RBW

Sweep = as necessary to capture the entire dwell time per hopping channel

Detector function = peak

Trace = max hold

If possible, use the marker-delta function to determine the dwell time. If this value varies with different modes of operation (e.g., data rate, modulation format, etc.), repeat this test for each variation.

Measurement setup is same as sub-clause 1.9.1.

1.9.5 Peak Output Power (Conduction)

(Step 1) Use the following spectrum analyzer settings:

Span = approximately 5 times the 20 dB bandwidth, centered on a channel

RBW > the 20 dB bandwidth of the emission being measured

VBW \geq RBW

Sweep = auto

Detector function = peak

Trace = max hold

Allow the trace to stabilize. Use the marker-to-peak function to set the marker to the peak of the emission. Record the reading P1.

(Step 2) Replace the EUT with the signal generator. Adjust the level of the signal generator output until the reading P1.

(Step 3) Replace the spectrum analyzer with the power meter. Record the reading of power meter P2. The peak output power of the EUT is P2.

Step 1

Step 2

Step 3

1.9.6 Peak Power Density (Conduction)

Use the following spectrum analyzer settings:

Span = approximately 5 times the 20 dB bandwidth, centered on a channel

RBW = Specified Value

VBW \geq RBW

Sweep = auto

Detector function = peak

Trace = max hold

Allow the trace to stabilize. Use the marker-to-peak function to set the marker to the peak of the emission.

Measurement setup is same as sub-clause 1.9.1.

1.9.7 Peak Output Power and Peak Power Density (Radiation)

The radiated power output and the field strength of the transmitter radiation were measured at the distance at 3 meters away from the transmitter under test which was placed on a turntable 0.8 meter in height. The receiving antenna was oriented for vertical polarization and raised or lowered through 1 to 4 meters until the maximum signal level was detected on the measuring instrument. The transmitter under test was rotated through 360° until the maximum signal was received. The measurement was repeated with the receiving antenna in the horizontal polarization.

The transmitter was removed and replaced with the antenna. The center of the antenna was placed approximately at the same location as the center of the transmitter. The antenna was fed with a signal generator, and the output level of the signal generator was adjusted to obtain the previously recorded maximum reading at the particular frequency and recorded. This procedure was repeated with the receiving antenna and the antenna in the orthogonal polarization.

The input power into the antenna was measured using the power meter. The level of the emissions in dBm(EIRP) were calculated from the following formula:

$$\text{Transmitter Power[dBm] (EIRP)} = (\text{Meter Reading of Power Meter}) + (\text{Antenna Gain[dBi]})$$

Use the following spectrum analyzer settings:

Span = approximately 5 times the 20 dB bandwidth, centered on a channel

RBW : Greater than the 20 dB bandwidth of the emission being measured
or Specified Value

VBW \geq RBW

Sweep = auto

Detector function = peak

Trace = max hold

Allow the trace to stabilize. Use the marker-to-peak function to set the marker to the peak of the emission.

1.9.8 Spurious Emission (Conduction)

Band-edge Compliance of RF Conducted Emissions

Use the following spectrum analyzer settings:

Span = wide enough to capture the peak level of the emission operating on the channel closest to the bandedge, as well as any modulation products which fall outside of the authorized band of operation

RBW \geq 1% of the span

VBW \geq RBW

Sweep = auto

Detector function = peak

Trace = max hold

Allow the trace to stabilize. Set the marker on the emission at the bandedge, or on the highest modulation product outside of the band, if this level is greater than that at the bandedge. Enable the marker-delta function, then use the marker-to-peak function to move the marker to the peak of the in-band emission.

Now, using the same instrument settings, enable the hopping function of the EUT. Allow the trace to stabilize. Follow the same procedure listed above to determine if any spurious emissions caused by the hopping function also comply with the specified limit.

Spurious RF Conducted Emissions

Use the following spectrum analyzer settings:

Span = wide enough to capture the peak level of the in-band emission and all spurious emissions (e.g., harmonics) from the lowest frequency generated in the EUT up through the 10th harmonic. Typically, several plots are required to cover this entire span.

RBW = 100 kHz

VBW \geq RBW

Sweep = auto

Detector function = peak

Trace = max hold

Allow the trace to stabilize. Set the marker on the peak of any spurious emission recorded. The level displayed must comply with the limit specified in this Section.

Measurement setup is same as sub-clause 1.9.1.

1.9.9 Radiated Emission (9 kHz - 30 MHz) :

According to description of ANSI C63.4-2001 sec.13.1.4, the preliminary radiated emissions measurement were carried out. The preliminary radiated measurements were performed at the measurement distance that specified for compliance to determine the emission characteristics of the EUT.

The EUT configuration, cable configuration and mode of operation were determined for producing the maximum level of emissions. These configurations were used for the final radiated emissions measurements.

- Side View -

1.9.10 Radiated Emission (30 MHz - 1000 MHz) :

According to description of ANSI C63.4-2001 sec.13.1.4, the preliminary radiated emissions measurement were carried out. The preliminary radiated measurements were performed at the measurement distance that specified for compliance to determine the emission characteristics of the EUT.

The EUT configuration, cable configuration and mode of operation were determined for producing the maximum level of emissions. These configurations were used for the final radiated emissions measurements.

Anechoic Chamber**- Side View -**

1.9.11 Radiated Emission (Above 1 GHz) :

According to description of ANSI C63.4-2001 sec.13.1.4, the preliminary radiated emissions measurements were carried out. The preliminary radiated measurements were performed at the measurement distance that specified for compliance to determine the emission characteristics of the EUT.

The EUT configuration, cable configuration and mode of operation were determined for producing the maximum level of emissions. These configurations were used for the final radiated emissions measurements.

Anechoic Chamber**- Side View -**

1.9.12 AC Power Line Conducted Emission (150 kHz - 30 MHz) :

According to description of ANSI C63.4-2001 sec.13.1.3, the AC power line preliminary conducted emissions measurements were carried out.

The preliminary conducted measurements were performed using the spectrum analyzer to observe the emission characteristics of the EUT.

The EUT configuration, cable configuration and mode of operation were determined for producing the maximum level of emissions. These configurations were used for final AC power line conducted emissions measurements.

2. TEST DATA

2.1 Channel Separation

Date : July 11, 2004Temp.: 23 °C Humi.: 45 %

Mode of EUT : Hopping (Max. power setting)

Test Port : Temporary antenna connector

Channel Separation (kHz)	Limit
1004.008	25 kHz or 20 dB bandwidth of hopping channel

Tested by :

M. Takahashi
Masanori Takahashi
Testing Engineer

2.2 Minimum Hopping ChannelDate : July 11, 2004Temp.: 23 °C Humi.: 45 %

Mode of EUT : Hopping (Max. power setting)

Test Port : Temporary antenna connector

Hopping Channel	Limit
79	15

Tested by : M. Takahashi
Masanori Takahashi
Testing Engineer

2.3 Occupied BandwidthDate : July 11, 2004Temp.: 23 °C Humi.: 45 %

Mode of EUT : TX 2403 MHz (Max. power setting)

Test Port : Temporary antenna connector

Bandwidth (kHz)	Limit (kHz)
933.9	N/A

Mode of EUT : TX 2441 MHz (Max. power setting)

Test Port : Temporary antenna connector

Bandwidth (kHz)	Limit (kHz)
929.9	N/A

Mode of EUT : TX 2480 MHz (Max. power setting)

Test Port : Temporary antenna connector

Bandwidth (kHz)	Limit (kHz)
921.8	N/A

Tested by : M. Takahashi
Masanori Takahashi
Testing Engineer

2.4 Average Time of OccupancyDate : July 11, 2004Temp.: 23 °C Humi.: 45 %

Mode of EUT : Hopping(DH1 packet) Max. power setting

Test Port : Temporary antenna connector

Dwell Time	Limit
(ms)	
135.9	400 ms per 31.6 s

Note : The system makes worst case 1600 hops per second or 1 time slot has a length of 625 μ s with 79 channels. A DH1 Packet need 1 time slot for transmitting and 1 time slot for receiving. Then the system makes worst case 800 hops per second with 79 channels. So the system has each channel 10.1266 times per second and so for 31.6 seconds the system have 320.0 times of appearance.

Each tx-time per appearance is 0.4248 ms.

Dwell time = $320.0 * 0.4248 = 135.9$ ms

Mode of EUT : Hopping (DH3 packet) Max. power setting
Test Port : Temporary antenna connector

Dwell Time	Limit
(ms)	
270.9	400 ms per 31.6 s

Note : A DH3 Packet need 3 time slot for transmitting and 1 time slot for receiving. Then the system makes worst case 400 hops per second with 79 channels. So the system have each channel 5.063 times per second and so for 31.6 seconds the system have 160.0 times of appearance.
Each tx-time per appearance is 1.693 ms.
Dwell time = 160.0 * 1.693 = 270.9 ms

Mode of EUT : Hopping (DH5 packet) Max. power setting
Test Port : Temporary antenna connector

Dwell Time	Limit
(ms)	
314.3	400 ms per 31.6 s

Note : A DH5 Packet need 5 time slot for transmitting and 1 time slot for receiving. Then the system makes worst case 266.667 hops per second with 79 channels. So the system have each channel 3.3755 times per second and so for 31.6 seconds the system have 106.7 times of appearance. Each tx-time per appearance is 2.946 ms.
Dwell time = $106.7 \times 2.946 = 314.3$ ms

2.11 AC Power Line Conducted Emissions

This test is not applicable.

2.12 RF Exposure Compliance

Maximum output power (radiated): +1.64dBm(refer to page 39)

Then +1.64 dBm = 1.46 mW

EUT is operating from 2402-2480MHz, so the middle frequency is 2.441GHz.

The low threshold power is 60 / 2.441 = 24.6mW.

EUT output power is less than 24.6mw so SAR evaluation is not required.
