Factory name:	NEW BRIGHT INDUSTRIAL CO., LTD
Location:	9/F., NEW BRIGHT BUILDING, 11 SHEUNG YUET ROAD, KOWLOON BAY, KOWLOON, HONG KONG
Product:	Radio Control Toy Transmitter Model: G6D615HD-1

Sample No:	HK110531/017
Test date:	June 18, 2011
Test Requested:	FCC Part 15 - 2009
Test Method:	ANSI C63.4 - 2003
FCC ID:	G6D615HD-1

The results given in this report are related to the tested specimen of the described electrical apparatus.

**CONCLUSION:** The submitted sample was found to **COMPLY** with requirement of FCC Part 15 Subpart C.

### Location of the test laboratory

Radiated and Conducted emissions measurements are investigated and taken pursuant to the procedures of ANSI C63.4 – 2003. An Open Area Test Site and Full Anechoic Chamber (FCC Listed Site, Registration No. 642151) are set up for investigation and located at :

### Equipment Under Test [EUT]

#### Description of Sample:

Model Name: Radio Control Toy Transmitter  
Model Number: G6D615HD-1  
Rating: 3Vd.c. ("AA" size battery x 2)

#### Description of EUT Operation:

The Equipment Under Test (EUT) is a NEW BRIGHT INDUSTRIAL CO., LTD of Radio Control toy. It is 1 wheel, 1 trigger, 1 knob and 1 switch transmitter and operating at 27.145MHz. The EUT continues to transmit buttons is being pressed, Modulation by IC, and type is pulse modulation.

The transmitter has different control:

1. Wheel – control left and right
2. Trigger – control forward and backward
3. THROTTLE TRIM knob – trim left and right control
4. On/Off switch – control ON / OFF

#### Antenna Requirement (Section 15.203)

The EUT is use of a screw-on type antenna. The antenna consists of 38cm long metal antenna. The antenna connector is custom-made and not be able to found in the market. It also cannot be replaced with other antenna other then the one bundled inside the package. The requirements of S15.203 are met. There are no deviations or exceptions to the specifications.

### Radiated Emissions (Fundamental)

Test Requirement:	FCC Part 15 Section 15.227
Test Method:	ANSI C63.4
Test Date(s):	2011-06-18
Temperature:	32.0 °C
Humidity:	65.0 %
Atmospheric Pressure:	100.8 kPa
Mode of Operation:	Transmission mode
Tested Voltage:	3Vd.c. ("AA" size battery x 2)

### Test Procedure:

Radiated emissions measurements are investigated and taken pursuant to the procedures of ANSI C63.4 – 2003.

The equipment under test (EUT) was placed on a non-conductive turntable with dimensions of 1.5m x 1m and 0.8m high above the ground. 3m from the EUT, a broadband antenna mounting on the mast received the signal strength. During the test, each emission was maximized by: having the EUT continuously working, investigated all operating modes, rotated about all 3 axis (X, Y & Z) and considered typical configuration to obtain worst position, manipulating interconnecting cables, For battery operated equipment, the equipment tests shall be perform using new battery. The turntable was rotated to maximize the emission level. The antenna was then moving along the mast from 1m up to 4m until no more higher value was found. Both horizontal and vertical polarization of the antenna were placed and investigated.

For below 30MHz, a loop antenna with its vertical plane is place 3m from the EUT and rotated about its vertical axis for maximum response at each azimuth about the EUT. And the centre of the loop shall be 1m above the ground.

Location: The Roof, Westin Centre, 26 Hung To Road, Kwun Tong, Kowloon, Hong Kong

### Test Setup: Open Area Test Site

**TEST REPORT No: (5211)165-1069**

**Limits for Field Strength of Fundamental Emissions [FCC 47CFR 15.227]:**

Frequency Range of Fundamental [MHz]	Field Strength of Fundamental Emission [Peak] [ $\mu\text{V}/\text{m}$ ]	Field Strength of Fundamental Emission [Average] [ $\mu\text{V}/\text{m}$ ]
26.96 – 27.28	100,000 (100 dB $\mu\text{V}/\text{m}$ )	10,000 (80 dB $\mu\text{V}/\text{m}$ )

**Measurement Data**

**Test Result of (Transmission mode): PASS**

**Detection mode: Peak**

Frequency (MHz)	Polarity (H/V) and degree	Antenna Factor and Cable Loss (dB/m)	Field Strength at 3m (dB $\mu\text{V}/\text{m}$ )	Limit at 3m (dB $\mu\text{V}/\text{m}$ )	Margin (dB)
27.145	V/0°	9.6	56.3	100	-43.7

**Detection mode: # Average**

Frequency (MHz)	Polarity (H/V) and degree	Antenna Factor and Cable Loss (dB/m)	Field Strength at 3m (dB $\mu\text{V}/\text{m}$ )	Limit at 3m (dB $\mu\text{V}/\text{m}$ )	Margin (dB)
27.145	V/0°	9.6	**36.3	80.0	-43.7

# For pulse modulated devices and using measuring equipment employing a peak detection mode, properly adjusted for such factor as pulse desensitisation.

\*\*Duty Cycle Correction =  $20\text{Log}(0.088) = -21.1\text{dB}$

Finally, -20dB is taken as the precedence.

Note: Field Strength includes Antenna Factor and Cable Loss.

Receiver setting: RBW = 100KHz  
VBW = 300KHz

Note: Field Strength includes Antenna Factor and Cable Loss.

Receiver setting: RBW = 120KHz  
VBW = 120KHz

## TEST REPORT No: (5211)165-1069

### 26dB Bandwidth of Fundamental Emission

Test Requirement: FCC 47 CFR 15.227  
Test Method: ANSI C63.4:2003 (Section 13.1.7)  
Test Date(s): 2011-06-18  
Temperature: 32.0 °C  
Humidity: 65.0 %  
Atmospheric Pressure: 100.8 kPa  
Mode of Operation: Transmission mode  
Tested Voltage: 3Vd.c. ("AA" size battery x 2)

#### Test Method:

The bandwidth is measured at an amplitude level reduced from the reference level by a specified ratio. The reference level is the level of the highest amplitude signal observed from the transmitter at the fundamental frequency. Once the reference level is established, the equipment is conditioned with typical modulating signal to produce the worst-case (i.e. the widest) bandwidth.

#### Limits for 26dB Bandwidth of Fundamental Emission:

Frequency [MHz]	26dB Bandwidth [KHz]	Limits [MHz]
27.1456	85.76	within 26.96 – 27.28

Test Result of 26dB Bandwidth of Fundamental Emission: PASS

Date: 18.JUN.2011 15:18:49

## TEST REPORT No: (5211)165-1069

### Duty Cycle Correction During 100msec:

Each function key sends a different series of characters, but each packet period (43.2msec) never exceeds a series of (3.8msec) pulses. Assuming any combination of short and long pulses maybe obtained due to encoding the worst case transmit duty cycle would be considered (3.8msec) per 43.2msec = 8.8% duty cycle.

Figure A through B shows the characteristics of the pulse train for one of these functions.

Remarks:

Duty Cycle Correction =  $20\text{Log}(0.088) = -21.1\text{dB}$

Finally, -20dB is taken as the precedence.

The following figures [Figure A to Figure B] show the characteristics of the pulse train for one of these functions.
