Application No.: <u>HM155217</u>

Date: 7 October 2005

FCC ID: <u>G6D656HS</u>

Circuit Description

The $\underline{27.145}$ MHz crystal oscillator drives the base of $\underline{Q2}$ the final/buffer amplifier. The modulation provided by \underline{IC} . The output of $\underline{Q2}$ has the matching network consisting of $\underline{L4}$ and $\underline{C6}$ that limit the harmonic content and effect the proper coupling of the antenna to the output stage.

Antenna, Ground and Power Source

The antenna consists of a <u>55cm</u> long metal antenna. There is no external ground connection. The ground is only that of the printed circuit board. Electric current is supplied by a <u>9 Volt ("AA" size battery x 6)</u> primary battery.

Operation Descriptions

The transmitter is a <u>toy car</u> operating at <u>27.145</u>MHz band. The transmitter is powered by a <u>9Volt</u> battery (<u>AA x 6</u>) and the transmitting frequency is crystal controlled. There are <u>2</u> <u>joystick</u> to control the forward reverse motor and director of movement. The operation is achieved by different combinations of form pulse modulating signal on the <u>27.145MHz</u> carrier frequency.

Remarks:

The transmitter is a 2 Joystick transmitter.

The EUT continues to transmit while <u>Joystick</u> is being pressed.

It is <u>Voice</u> transmitter, Modulation by <u>Microphone</u>; and type is <u>Pulse</u> modulation.
