

FCC ID: G95WETR1000

Circuit Description

The 433MHz crystal oscillator drives the base of Q3 the final/buffer amplifier. The modulation provided by IC. The output of Q3 has the matching network consisting of L1 and C5 that limit the harmonic content and effect the proper coupling of the antenna to the output stage.

Antenna, Ground and Power Source

There is no external antenna. There is no external ground connection. The ground is only that of the printed circuit board. Electric current is supplied by a 3 Volt ("AAA" size battery x 2) primary battery.

Operation Descriptions

The transmitter is a wireless weather transmitter operating at 433MHz band. The transmitter is powered by a 3 Volt battery (AAA x 2) and the transmitting frequency is crystal controlled. The operation is achieved by different combinations of form pulse modulating signal on the 433MHz carrier frequency.

Remarks:

The transmitter is a ***Trigger*** transmitter.

The EUT continues to transmit while ***Trigger*** is being pressed.

It is ***Pulse*** transmitter, Modulation by ***Data Code***, and type is ***Pulse*** modulation.
