

CT-D201 User's Manual

IMPORTANT SAFETY INSTRUCTIONS

When using your telephone equipment, basic safety precautions should always be followed to reduce the risk of fire, electric shock, and injury to persons, including the following:

1. Read and understand all instructions.
2. Follow all warnings and instructions marked on the product.
3. Unplug this product from the wall outlet before cleaning. Do not use liquid cleaners or aerosol cleaners. Use a damp cloth for cleaning.
4. Do not use this product near water, for example, near a bathtub, washbowl, kitchen sink, or laundry tub, in a wet basement or near a swimming pool.
5. Do not place this product on an unstable cart, stand, or table. The product may fall, causing serious damage to the product.
6. Slots and openings in the cabinet at the back or bottom are provided for ventilation, to protect it from overheating. These openings should never be blocked or covered. The openings should never be blocked by placing the product on the bed, sofa, rug, or other similar surface. This product should never be placed near or over a radiator or heat register. This product should not be placed in a built-in installation unless proper ventilation is provided.
7. This product should be operated only from the type of power source indicated on the marking label. If you are not sure of the type of power supply to your home, consult your dealer or local power company.
8. Do not allow anything to rest on the power cord. Do not locate this product where the cord will be abused by persons walking on it.
9. Do not overload wall outlets and extension cords as this can result in the risk of fire or electric shock.
10. Never push objects of any kind into this product through cabinet slots as they may touch dangerous voltage points or short out parts that could result in a risk of fire or electric shock. Never spill liquid of any kind on the product.
11. To reduce the risk of electric shock, do not disassemble this product, but take it to a qualified service contractor when some service or repair work is required. Opening or removing covers may expose you to dangerous voltages or other risks. Incorrect reassembly can cause electric shock when the appliance is subsequently used.
12. Unplug this product from the wall outlet and refer servicing to qualified service personnel under the following conditions:
 - A. When the power supply cord or plug is damaged or frayed.
 - B. If liquid has been spilled into the product.
 - C. If the product has been exposed to rain or water.

If the product does not operate normally by following the operating instructions, Adjust only those controls that are covered by the operating instructions. Improper

- D. Adjustments of other controls may result in damage and will often require extensive work by a qualified technician to restore the product to normal operation.
 - E. If the product has been dropped or the cabinet has been damaged.
 - F. If the product exhibits a distinctive change in performance.
13. Avoid using a telephone (other than a cordless type) during an electrical storm. There may be a remote risk of electric shock from lightning.
14. Do not use the telephone to report a gas leak in the vicinity of the leak.

BATTERY SAFETY INSTRUCTION

CAUTION: To reduce the risk of fire or injury to persons, read and follow these instructions:

1. Use only the following type and size of handset batteries: cordless Telephone Batteries DC3.6V, 550mAh, Ni-MH AAA size Battery pack.
2. Do not dispose of the battery in a fire. The cell may explode. Check with local codes for possible special disposal instructions.
3. Do not open or mutilate the battery. Released electrolyte is corrosive and may cause damage to the eyes or skin. It may be toxic if swallowed.
4. Exercise care in handling the battery in order not to short the battery with conducting material such as rings, bracelets and keys. The battery or conductor may overheat and cause burns.
5. Recharge only the battery provided with or identified for use with this product. The battery may leak corrosive electrolyte or explode if it is not the correct type.
6. Do not attempt to rejuvenate the battery provided with or identified for use with this product by heating them. Sudden release of the battery electrolyte may occur causing burns or irritation to eyes or skin.
7. When inserting the batteries into this product, the proper polarity or direction must be observed. Reverse insertion of batteries can cause charging that may result in leakage or explosion.
8. Remove the batteries from this product if the product will not be used for a long period of time (several months or more) since during this time the battery could leak in the product.
9. Discard "dead" batteries as soon as possible since "dead" batteries are more likely to leak in a product.
10. Do not store this product, or the battery provided with or identified for use with this product, in high-temperature areas. Batteries that are stored in a freezer or refrigerator for the purpose of extending shelf life should be stabilized at room temperature prior to use after cold storage.
11. Disconnect telephone lines before installing batteries.

INSTALLATION PRECAUTIONS

1. Never install telephone wiring during a lightning storm.
2. Never install telephone jacks in wet locations unless the jack is specifically designed for wet locations.
3. Never touch uninsulated telephone wires or terminals unless the telephone line has been disconnected at the network interface.
4. Use caution when installing or modifying telephone lines.

FCC NOTICE

The FCC requires that you be advised of certain requirements involving the use of this telephone.

1. This telephone is Hearing Aid Compatible.
2. This equipment complies with Part 68 of the FCC rules. On the bottom of this equipment is a label that contains, among other information, the FCC registration number and Ringer Equivalence Number (REN) for this equipment. If requested, provide this information to your telephone company.
3. The REN is useful to determine the quantity of devices you may connect to your telephone line and still have those entire devices ring when your number is called. In most, but not all areas, the sum of the RENs of all devices should not exceed five (5.0). To be certain of the number of devices that you may connect to your line, as determined by the REN, you should call your local telephone company to determine the maximum REN for your calling area.
4. If your telephone causes harm to the telephone network, the telephone company may discontinue your service temporarily. If possible, they will notify you in advance. But if advance notice is not practical, you will be notified as soon as possible. You will be advised of your right to file a complaint with the FCC.
5. Your telephone company may make changes to its facilities, equipment, operations or procedures that could affect the proper operation of your equipment. If they do, you will be given advance notice so as to give you an opportunity to maintain uninterrupted service.
6. If you experience trouble with the telephone, please contact service center at the below address. The telephone company may ask you to disconnect this equipment from the network until the problem has been corrected or you are sure that the equipment is not malfunctioning.
Services can be obtained at: Columbia Telecommunications Inc.
174 Milbar Blvd. Farmingdale, NY 11735
Tel: 1 -800-889-7434
7. This equipment may not be used on coin service provided by the telephone company. Connection to party line service is subject to state tariffs. (Contact your state public utility commission or corporation commission for information).
8. **WARNING:** Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.
 - **NOTE:** This equipment has been tested and found, comply with the limits for a class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in residential installation. This equipment generates, uses and can radiate radio frequency energy. If not install and used in accordance with the instruction, may cause harmful interference to radio communications. However, there is no guarantee that interference will no occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measure:

2.4GHz DIGITAL CORDLESS TELEPHONE with CID
MODEL: CT-D201

USA VERSION

- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver needed.
- Consult the dealer of an experienced radio / TV technician for help.

Some cordless phones operate at frequencies that may cause interference to nearby TVs and VCRS ; to minimize or prevent such interference, the base of the cordless phone should not be placed near or on top of a TVs or VCR. If interference is experienced, moving the cordless telephone farther away from the TV or VCR will often reduce or eliminate the interference.

Checking the Packing Contents

Make sure you have received the following items in the package.

- Base Unit
- Handset & Belt Clip
- Ni-MH Rechargeable Battery
- AC/DC Adaptor
- Telephone Lind Cord
- User's Manual

Hand LCD Description

Setting Up the Base Unit

Choose the Base Unit Location

Before choosing a location for your phone, read the **important safety instruction** and **Installation precautions**.

- Avoid Heat sources, such as radiators, and ducts, and sunlight
- Avoid Television sets and other electronic
- Avoid noise sources such as a windows by a street with heavy traffic
- Avoid Microwave ovens
- Avoid excessive moisture, extremely low temperatures, dust, mechanical vibrations, or shock
- Avoid personal computers
- Avoid other cordless telephone
- The best location is in an upstairs room and central to the area to be covered

Connect the Base Unit

Desktop Installation:

- Connect the telephone line cord to the TEL LINE jack and to a telephone outlet.
- Connect the AC adaptor to the DC9V jack and to a standard 120VAX wall outlet.
- Arrange the cable through the cable channel.

Note: Use only the supplied AC adaptor. Do not use any other adaptor.

Choose the Dialing Mode

Depending on your dialing system, set the **TONE/PULSE** switch as you dialing system.

Enter your Area Code number

You may wish to enter your local area code before you use this phone for the first time, or move to new area code, you should enter your area code. You can enter by using the User Setting Feature. (Refer to page 30)

Note: If your calling area require 10-digits dialing, please skip this step.

Preparing the Battery Pack

How to install the Ni-MH Battery

- Remove the battery compartment cover of the Handset by sliding it down.
- Connect the battery plug along slot into the Handset's battery connector
- Insert the Ni-MH battery pack into the battery compartment.
- Replace the battery compartment cover by sliding it up towards the Handset.

Note: The Ni-MH battery must be fully charged at least 14~16 hours before initial use.

Battery Use Time

From fully charged.

Talk Time: If the battery is full charged, the length of time you may talk on your telephone before it is Necessary to recharge it is approximately 3 hours.

Standby Time: The length of time your telephone may be idle and out of its base before it is necessary to recharge it is approximately 8days.

When The Battery Charge Becomes Low

The LCD on the handset indicates a low battery condition when the battery pack is very low and needs to be charged. And then the handset will generate warring tone. If the handset is in use the handset beeps. Complete your conversation as quickly as possible and return the handset to the base unit for charging. **If you don't change the battery pack or return to base unit, your call terminates after two minutes.**

Note : The LCD on the handset indicates a low battery condition only standby mode. If the handset flashes "Low Battery", you can't use the **TALK** key. The handset should be charged for **at least 8 hours**.

Initialize the Handset to the Base unit (ID setting)

To initialize the handset to the base unit, perform the following: simultaneously push and hold the **PAGE** key on the base unit and the **FLASH** key on the handset until “**Register**” appears on the display. The unit will beep once to indicate registration is complete (ID data is transmitted to Handset by RF part of base unit. The Handset is received ID data by RF part of Handset and transmitted ACK signal to RF part). And then “**Successful**” will appear on the display. If the operation has failed, repeat the above procedure.

Telephone Operations

S a v e d

Note: Your phone stores up to 40 name/numbers before the memory becomes full. If your phone memory is full, to store new name and number, you must delete old and unnecessary call.

Note : If you do not subscribe to Call Waiting Deluxe service from your phone company, use Call Waiting Deluxe feature by using just **FLASH** key.

Call waiting deluxe feature

Call waiting Deluxe is a network feature which provides the customer with various options for the disposition of a new call waiting call. When you receive a call waiting call, you can select the following call waiting deluxe features on the handset. Upon selection the desired option, the desired choice will send the corresponding **Flash/DTMF** key sequence to the network to enact the chosen function. In the case of **Answer**, **Hold** and **Conference**, there are subsets of options as to what the user can do with the call.

Note : You must subscribe specially to Call Waiting Deluxe in order to receive these options.

Stable Two-party call state

Generic option name	Comment
Answer	Your phone is connected to new call, current call is held.
Conference	3- party call
Hold	New call is held (and given "hold" announcement)
Drop	Your phone is connected to new call, current call is dropped
Announcement	New call given announcement (then disconnected)
Forward	New call is forwarded (usually to voice mail)

Held call state

Generic option name	Comment
Return	Alternates between callers
Drop	Current call is dropped
Conference	3-party call

Conference state

Generic option name	Comment
Drop first	Original call drop
Drop last	Current call is dropped

1. Call waiting timeout is 25 seconds after end of FSK
2. If new call waiting received on 2-way call mode, then the old call waiting mode is clear and start call waiting mode newly.

TROUBLESHOOTING

Symptoms	Possible Solution / Cause
No dial tone or phone will not dial out	Check that you have plugged the AC power adapter into a working outlet. Check all telephone cord connections or try another jack. Check to be sure that the phone is set to the correct type of service (tone/pulse)
Cannot hear the telephone ringing	Check the ringer volume select mode (at the off mode the ring not be heard). Refer to user setting feature. You may have exceeded the Ringer Equivalence Number (REN) limit of how many phones can be connected to the same line. The REN total of all devices (printed on the bottom label of each unit) should not exceed five (5). Disconnect the appropriate units to lower the REN total.
The handset does not work	Move the handset closer to the base unit Be sure the phone line cord and AC adaptor are correctly and securely connected. Be sure the battery pack is connected and charged.
Volume drops or you hear Unusual Sounds	Someone has pickup another phone on the same line. Hang up the other phone.
Static interference (Crackling sound during call)	Do not place near appliances or large metal objects. Keep the handset away from interference sources such as computers, remote control toys, wireless alarm systems, wireless intercoms, room monitors, fluorescent lights, and electrical appliances.
The handset's range decreases	Return the handset to the base unit to recharge the battery pack. Move the base unit so that it is centrally located in your residence or office and make sure that the base unit is not located near appliances.
Receiver sound flutters or fades	Be sure the battery pack is charged. Move the handset closer to the base unit.
No data sent	Check your service. Call your local telephone company to ensure that you have caller ID or call waiting service. Contact your local telephone company's service department if the problem continues for more than 24 hours. Your local telephone company central office may be temporarily experiencing an overload.
Does not charge or Charge light does not work	Check the Ni-MH battery pack for proper connection inside the battery compartment on the handset. Make sure the charging contacts on both the base unit and the handset are in contact during charging. The charging contacts and terminals may need cleaning with an alcohol-dampened swab. Check the AC adapter. Be sure that the adapter is not damaged and that it is securely plugged into a working outlet.
Caller ID /call waiting ID Does not work properly	Contact your telephone service provider to verify that your caller ID service is activated and working properly. Caller ID service may not work if you have your phone connected to a private branch exchange [PBX]. You answered the call before the caller ID data was displayed, which usually occurs after the second ring.
