RF Exposure Evaluation declaration

Product Name	CHARGE AND COMMUNICATION BASE
Model No.	CCB02-100BT
FCC ID	HD5CCB02A

Applicant	Honeywell International Inc.
Address	9680 Old Bailes Rd Fort Mill South Carolina 29707 United States

Date of Receipt	Nov. 27, 2012
Date of Declaration	Feb. 07, 2013
Report No.	12C029R-RFUSP29V01

The declaration results relate only to the samples calculated.

The declaration shall not be reproduced except in full without the written approval of QuieTek Corporation.

This report must not be used to claim product endorsement by NVLAP any agency of the U.S. Government

1. RF Exposure Evaluation

1.1. Limits

According to FCC 1.1310: The criteria listed in the following table shall be used to evaluate the environment impact of human exposure to radio frequency (RF) radiation as specified in 1.1307(b)

LIMITS FOR MAXIMUM PERMISSIBLE EXPOSURE (MPE)

Frequency Range (MHz)	Electric Field Strength (V/m)	Magnetic Field Strength (A/m)	Power Density (mW/cm^2)	Average Time (Minutes)
(A) Limits for Occupational/ Control Exposures				
300-1500	--	--	F/300	6
1500-100,000	--	--	5	6
(B) Limits for General Population/ Uncontrolled Exposures				
300-1500	--	--	F/1500	6
1500-100,000	--	--	1	30

F= Frequency in MHz

Friis Formula

Friis transmission formula: $Pd = (Pout*G)/(4*pi*r^2)$

Where

Pd = power density in mW/cm^2

Pout = output power to antenna in mW

G = gain of antenna in linear scale

Pi = 3.1416

R = distance between observation point and center of the radiator in cm

Pd id the limit of MPE, 1 mW/cm^2. If we know the maximum gain of the antenna and the total power input to the antenna, through the calculation, we will know the distance r where the MPE limit is reached.

1.2. Test Procedure

Software provided by client enabled the EUT to transmit and receive data at lowest, middle and highest channel individually.

The temperature and related humidity: 18℃ and 78％ RH.

1.3. Test Result of RF Exposure Evaluation

Product   :   CHARGE AND COMMUNICATION BASE
Test Item   :   RF Exposure Evaluation
Test Site   :   No.3 OATS

Antenna Gain

Antenna Gain: The maximum Gain measured in fully anechoic chamber is 1.8dBi in logarithm scale.

1Mbps (GFSK)

Output Power Into Antenna & RF Exposure Evaluation Distance (1.8dBi):

Channel	Frequency (MHz)	Output Power to Antenna (mW)	Power Density at R = 20 cm (mW/cm2)
00	2402.00	5.8345	0.001757
38	2441.00	6.3096	0.001900
79	2480.00	6.7608	0.002036

Power density in column 4 is much lower than the limit (1 mW/cm^2).
