

SV7000FLO series Transmitter FCC Certification Application Request for Permissive Change for Alternate Channel Filter

Request for Confidentiality

Pursuant to 47CFR§0.459 we hereby request that all Exhibits and attachments to the Request for Permissive Change to the Equipment Certification HFLSV7000FLO be withheld from public inspection. Each of these documents contain information that is of a proprietary nature to our company, our suppliers and possibly to our customers. The confidentiality of such information is carefully guarded within our company and only shared when further disclosure is restricted by binding agreement.

Further, such detailed information is not normally included as part of the documentation package supplied with each transmitter system. We are therefore concerned that in the event the above described information were to be made available in a public forum, particularly one as easy to access as the World Wide Web, then our competitors, or those of our suppliers and customers, could easily obtain and use it to compromise our ability, and that of our suppliers and customers, to maintain our respective competitive positions in "the marketplace", worldwide. We therefore respectfully ask that you honor our request to maintain that confidentiality in regard to the specified documents.

Thank you very much for your consideration.

Sincerely,

Richard Sweitzer
Program/Project Manager
