

Confidentiality Request

Pertaining to Request for Certification of FCC ID: **I4U-25VST-AMP**

TO WHOM IT MAY CONCERN

Integrated Microwave Technologies (hereafter referred to as IMT) hereby respectfully requests confidentiality of certain materials pursuant to published FCC guidelines, with respect to our Request for Certification of FCC ID: I4U-25VST-AMP, in accordance with FCC Sections 0.459(b), and 0.457(d)

IMT has submitted a Technical Report, as required by FCC guidelines, in conjunction with the Request for Certification. Certain parts of this Technical Report and/or the attendant submittals contain information that are trade secrets and are requested to be withheld from public inspection.

The attachments and/or exhibits, henceforth collectively "Materials", designated as following are requested to remain confidential:

Exhibit Type	File Name
Schematics	I4U-25VST-AMP Schematics-Rev1p0.pdf
	SC902-M072-02E-E5.pdf
Bill of Materials	BOM_900-HPVST-001-R-RevA1.pdf
	BOM 900-HPVST-001.pdf
Amplifier SCD	690-A0030-01A-R-A.pdf
Operational Description	I4U-25VST-AMP Theory of Operation-Rev1p0.pdf
Block Diagram	I4U-25VST-AMP Block Diagram-Rev1p0.pdf
Internal Photos	I4U-25VST-AMP Internal Photos-Rev1p0.pdf

These materials contain commercial trade secret information that would reveal our unique proprietary system design which is a result of our proprietary Research and Development.

These materials comprise information that differentiates our products from those of our significant market competition, and which allow us to operate in the very competitive market for this product.

These materials, if released, would result in substantial competitive harm due to unlicensed copying of our proprietary design(s) in whole or in part.

To protect these materials, IMT does not release them to the public, and protects them from unauthorized disclosure by third parties via the execution of Non-Disclosure Agreements.

In respect to the internal photo of the final Power Amplifier, IMT feels that additional justification for confidentiality exists due to the fact that the amplifier circuit board(s) are mounted inside a sealed component that can sustain damage upon opening, and that opening would nullify any equipment warranty since the equipment is only serviceable by IMT or our designated technicians. For warranty administration purposes, IMT applies stickers to the component housings that will indicate if the housing has been opened, to ensure that only designated service technicians have access. The internal images of the amplifier would provide any reasonably savvy RF engineer the means to replicate the design and result in substantial competitive harm to IMT.

Also, the internal photos show the digital circuitries and IC markings, which would provide competitors information on the technologies used. Therefore, internal photos would expose our proprietary design information, would provide any reasonably savvy digital design engineer the means to replicate the design, and result in substantial competitive harm to IMT.

25VST-AMP is a microwave transmitter. It is only operated by and under the control of video transmission professionals. It is not a general consumer product, and it is not accessible by general public.

IMT requests that these materials be withheld from public inspection in perpetuity due to the possibility and likelihood that the designs will be utilized, in whole or in part, by IMT as the basis for future products which would likewise be subject to the same competitor interest.

Sincerely,

A handwritten signature in black ink that reads "Stephen D. Kitko". The signature is fluid and cursive, with a horizontal line underneath the name.
