Applicant: LoJack Corporation

FCC ID: IDIVLU-07
Model ITU7

To whom it may concern,

LoJack Corporation is applying for a permissive change to the IDIVLU-07 family. The Model ITU7 is a VLU7 Transponder with a couple of changes.

The Model ITU7 is designed to test LoJack vehicle installations. This new device incorporates the ruggedized case of the Model RL7 while adding the ability to interface with our mobile device application via a newly added Wi-Fi interface Module.

The second change incorporated was a shorter antenna. This unit being utilized as test equipment requires a shorter antenna with a lower power output requirements. The installer is typically within several feet of the vehicle while testing.

Regards,
