

RemotePoint Presenter Description of Operation

The RemotePoint Presenter is a hand held remote control device and receiver for use with PC based computers. The remote operates in the 900MHz ISM band and uses Manchester encoded FSK modulation. The remote consists of 5 push buttons, which are mainly intended to control a Power Point presentation. Some of the buttons also serve as left and right mouse clicks. A miniature joystick controls curser movement on the PC. The most typical application is for controlling a Powerpoint presentations with a digital projection system.
