

## **Response to TCB Findings**

Hello Yunus  
Here clarifications asked.

One model "VX1220HR" is missing from the test report. Please clarify the differences between this model and the others mentioned in the report.

The PCX1222HR, VX1222HR & VX1220HR cards has the same mother board and daughter board, only software changed between the three cards.

PCX1222 : Analog and digital I/O are activated (by software) with optional software.

VX1222 : Analog and Digital I/O are activated (by software) without optional software.

VX1220 : only Analog I/O are activated (by software).

Best Regards,  
Jacques LORQUIN
