RE: FCC ID: IHDP56JJ1

Applicant: Motorola Inc.

Correspondence Reference Number: IHD80543-B
Confirmation Number: 806160543-45
Date of Original Email: July 29, 2008

Subject: Follow-up Information

In regards to your recent TCB application referenced above, we kindly request that you provide the following additional information.

- 1) We have reviewed the response in reference to the PAR measurement requirements of §24.232(d). It is permissible to report the peak EIRP levels and therefore not need to report the PAR, however, we note that the newly reported Peak EIRP levels are lower than the original average levels listed in the test report. Please address this discrepancy and update the test report.

Response: The difference we see are within our measurement uncertainty.

- 2) In your response the Peak EIRP level for the GSM 1900 is slightly lower than the EDGE 1900 EIRP. However, the conducted output power in the original test report shows that the EDGE power is about 4dB lower than the GSM output power. Please address this

discrepancy.

Response: The conducted output power measurements in our report was not measured using a peak detector.

- 3) The newly reported peak radiated power levels also include data for the 850GSM band which had not been part of this submission. A previous RT was addressed as the GSM850 band being not applicable to this device. Please address the GSM850 data and operation.

Response: Please refer to the revised EMC report attached.

The items indicated above must be submitted before processing can continue on the above referenced application.

Sincerely,
PCTEST TCB
