

MOTOROLA

Date: October 14, 2010

Subject: Request for additional information regarding FCC ID: IHDP56LV1

Reference:

Supplemental SAR for Wi-Fi Hotspot

FCC Correspondence Reference Number: 91511

Date of Original Email:

October 14, 2010

Prepared by:

Andrew Bachler, Principal Staff Engineer
Motorola Mobile Device Business
Libertyville, Illinois 60048

Questions and responses follow:

1. Please update System Verification with Body System Check since the measurements were for Body SAR.
Response: Based on available interim guidelines, this information is not available.
2. Please revise reports changing "body-worn" to another appropriate term.
Response: Based on the available interim guidelines, Motorola Mobility used the term "body worn". We will comply with new terminology in FCC filings upon release of the corresponding guidelines.
3. Please clarify which CDMA mode was used for testing. 3G procedures as a data device recommends EVDO Rev. 0.
Response: Testing was performed to KDB 941225, so the CDMA and EVDO conducted power levels were measured. The CDMA conducted power levels were demonstrated to be representative of the device, so all testing was performed in the CDMA mode. The conducted power levels are presented in the attached revised SAR report. (Please also refer to to page 9 in the main SAR report.)
4. Page 23 mentions WCDMA 1900 but this device does not support WCDMA 1900. Please clarify.
Response: Please refer to the updated supplemental SAR report.
5. Page 3 describes the device with GSM and WCDMA capabilities. This was not included in the hotspot evaluation. Please clarify.
Response: Confirmed. This device also contains functions that are not operational in U.S. Territories. This filing is only applicable for US operations.
6. Please provide test photos with the 10mm setup
Response: Please refer to the updated supplemental SAR report.
