Subject: RE: Follow-Up Questions Regarding FCC ID: IHDT56JE1

Importance: High

Hi Greg,

Thanks for your quick Follow-up RT on this product FCC ID: IHDT56JE1.

Please find our new response to Q1 below and attached are revised exhibits in response to Q2 and Q3.

The FCC grants for this product are **extremely critical** to us right now, your speedy review and approval are highly appreciated!

## Thanks a lot!

Subject: Follow-Up Questions Regarding FCC ID: IHDT56JE1

Dear Andy,

Thank you for your response to the referenced application. Please see below follow-up question pertaining to your submittal.

## Follow-Up RT:

1. Thank you for your response. Please submit an internal photo of the EUT, as requested, identifying the BT and CDMA antennas and showing their locations and the distance(s) between them. In the future, please refer to this distance and the measured Bluetooth output power level, as compared to Pref, in order to arrive at the level of SAR testing required for the BT transmitter.

**Response:** Per the March 20, 2008 discussion with the examining engineer; Motorola chooses to use the summation method for evaluation of simultaneous transmitters. Photographs, measured distances, and power output levels to determine the "antenna pair SAR to antenna separation ration" are therefore not required.

2. The user's manual lists an incorrect maximum body SAR level. Please revise, and resubmit the manual.

Response: Please refer to the revised user manual attached.

3. Please include statement in Exhibits 6B-1 and 6B-2 (i.e. Page 3s) stating:

- HAC evaluation was only performed for CDMA in the 850 and 1900 bands.
- 1700 band under part 27 was not done since the current rules under 20.19 do not address this today.

Response: Please refer to the revised Exhibits 6B-1 and 6B-2 attached.

The items indicated above must be submitted before processing can continue on the above referenced application.

Sincerely,

Gregory Czumak Senior Certification Engineer

Quality Manager
