

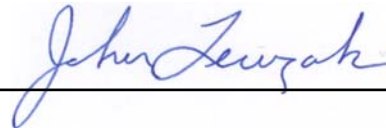

Exhibit 2. Statements of Certification -- Pursuant to 47 CFR 2.907

2.1. SAR Testing Attestation

The transceiver type described herein has been tested in accordance with the requirements contained in the appropriate Commission regulations. Specifically, with respect to RF Exposure (SAR) testing, there was no power reduction implemented in either the cellular or Wi-Fi bands during compliance testing with respect to simultaneous operation. All transmitters were evaluated at within 0.2 dB of their maximum rated power, as shown in the SAR test report. To the best of my knowledge, these tests were performed using measurement procedures consistent with industry or Commission standards, and demonstrate that this equipment complies with those standards..

2.2. Attestation Statement (Bluetooth/MOTotalk)

This device contains an embedded Bluetooth device, and MOTotalk capabilities, that Motorola confirms are compliant with the applicable Part 15 regulations.

15.247(a)(1)

- The hopping sequence must be pseudorandom.
- All Channels are used equally on average.
- The receiver input bandwidth is approximately equal to the transmit bandwidth.
- The receiver hops in sequence with the transmitted signal.

15.247(g)

The system is designed to comply with all of the regulations in Section 15.247 when the transmitter is presented with a continuous data (or information).

15.247(h)

The system does not coordinate its channel selection/hopping sequence with other frequency hopping systems for the express purpose of avoiding the simultaneous occupancy of individual hopping frequencies by multiple transmitters.
