Subject: Request for additional information

In regards to your recent TCB application referenced above, we kindly request that you provide the following additional information.

1. Please revise the Cover Letter to provide a detailed description of the proposed modification that optimizes the receive diversity antenna. If parts were changed, a revised Parts List would be required; if the circuit design has changed, revised schematics would be required. Please address.

**Motorola Response:** There are no part changes or circuit design changes for this class 2 permissive change. Please refer to the revised cover letter for the modification description.

2. Please provide photos showing the modified front and rear housings.

**Motorola Response:** The modifications are mainly minor dimensional changes that were very subtle and can not be captured by photos.

3. The original application included data for a standard and an extended battery, however, Section 2.1 of the 90S EMC report does not reference either of them, but instead references a "slim BP6x" battery, which is not included in the original application at all. Does this c2pc also include the addition of a different battery for the EUT (the slim battery)? If so, additional (SAR) test data may also be required. Please clarify, making the appropriate revisions/additions to all necessary test reports and documentation.

**Motorola Response:** There are no battery additions for the class 2 change. We are only shipping in box battery BP7X. We have asked PCTEST lab to revise the EMC report.

The item indicated above must be submitted before processing can continue on the above referenced application.

Sincerely,

Gregory Czumak
