

# Report on the FCC and IC Testing of the Marquardt GmbH

Model: SE1

In accordance with FCC 47 CFR Part 15C and ISED Canada RSS-210 and ISED Canada RSS-GEN

Prepared for: Marquardt GmbH  
Schloßstrasse 16  
78604 Rietheim-Weilheim  
Germany

FCC ID: IYZSE1  
IC: 2701A-SE1

## COMMERCIAL-IN-CONFIDENCE

Date: 2019-09-02  
Document Number: TR-64038-67571-01 | Issue: 01

| RESPONSIBLE FOR      | NAME            | DATE       | SIGNATURE |
|----------------------|-----------------|------------|-----------|
| Project Management   | Michael Ingerl  | 2019-09-02 |           |
| Authorised Signatory | Markus Biberger | 2019-09-02 |           |

Signatures in this approval box have checked this document in line with the requirements of TÜV SÜD Product Service document control rules.

### ENGINEERING STATEMENT

The measurements shown in this report were made in accordance with the procedures described on test pages. All reported testing was carried out on a sample equipment to demonstrate limited compliance with FCC 47 CFR Part 15C and ISED Canada RSS-210 and ISED Canada RSS-GEN. The sample tested was found to comply with the requirements defined in the applied rules.

| RESPONSIBLE FOR | NAME           | DATE       | SIGNATURE |

| Testing         | Michael Ingerl | 2019-09-02 |           |

Laboratory Accreditation  
DAkS Reg. No. D-PL-11321-11-02

Laboratory recognition  
Registration No. BNetzA-CAB-16/21-15

ISED Canada test site registration  
3050A-2

### EXECUTIVE SUMMARY

A sample of this product was tested and found to be compliant with FCC 47 CFR Part 15C, ISED Canada RSS-210 and ISED Canada RSS-GEN:2016, Issue 09 (08-2016) and Issue 04 (11-2014).

### 1.3 Brief Summary

### of Results

A brief summary of the tests carried out in accordance with FCC 47 CFR Part 15C and ISED Canada RSS-210, ISED Canada RSS-GEN, FCC rule Part 2.1093, KDB 447498 D01 and RSS-102 Issue 5 is shown below.

| Section                                                             | Specification Clause        | Test Description                                            | Result | Comments/Base Standard |
|---------------------------------------------------------------------|-----------------------------|-------------------------------------------------------------|--------|------------------------|
| Configuration and Mode: DC Powered 12 V – Transmitting continuously |                             |                                                             |        |                        |
| 2.1                                                                 | 15.249 (b)(2), N/A and 6.11 | Frequency Tolerance Under Temperature Variations            | Pass   | ANSI C63.10 (2013)     |
| 2.2                                                                 | 15.209, 4.3 and 6.13        | Field Strength of any Emission                              | Pass   | ANSI C63.10 (2013)     |
| 2.3                                                                 | 15.215 (c), N/A and 6.6     | 20 dB Bandwidth                                             | Pass   | ANSI C63.10 (2013)     |
| 2.4                                                                 | 15.207, N/A and 8.8         | AC Power Line Conducted Emissions                           | Pass   | ANSI C63.10 (2013)     |
| 2.5                                                                 | 15.205, 4.1 and 8.10        | Restricted Band Edges                                       | Pass   | ANSI C63.10 (2013)     |
| 2.6                                                                 | 15.107 and 6.1              | Exposure of Humans to RF Fields and SAR exclusion threshold | Pass   | ANSI C63.4: 2014       |

**Table 2**

## 1.4 Product Information

### 1.4.1 Technical Description

| Equipment characteristics |                                                   |
|---------------------------|---------------------------------------------------|
| Type designation:         | SE1                                               |
| Type of equipment:        | Wireless Control Module                           |
| Operating Frequency:      | 21.85 kHz                                         |
| Number of RF channels:    | 1                                                 |
| Modulation:               | BPSK                                              |
| Modulation Content:       | Digital data                                      |
| Data Rate:                | 5.4 kBit/s                                        |
| Antenna:                  | Serial capacity and inductivity resonance circuit |
| Standby mode:             | Not Applicable                                    |
| Power supply:             | External DC supply                                |
|                           | Nominal: 12 V                                     |
|                           | Minimum: 9 V                                      |
|                           | Maximum: 16 V                                     |
|                           | Nominal frequency: DC                             |

## 1.5 Deviations from the Standard

none

## 1.6 EUT Modification Record

The table below details modifications made to the EUT during the test programme.  
The modifications incorporated during each test are recorded on the appropriate test pages.

| Modification State | Description of Modification still fitted to EUT | Modification Fitted By | Date Modification Fitted |
|--------------------|-------------------------------------------------|------------------------|--------------------------|
| 0                  | As supplied by the customer                     | Not Applicable         | Not Applicable           |

**Table 3**

## 1.7 Test Location

TÜV SÜD Product Service conducted the following tests at our Straubing Test Laboratory.

| Test Name                                                           | Name of Engineer(s) |
|---------------------------------------------------------------------|---------------------|
| Configuration and Mode: DC Powered 12 V – Transmitting continuously |                     |
| Frequency Tolerance Under Temperature Variations                    | Michael Ingerl      |
| Field Strength of any Emission                                      | Michael Ingerl      |
| 20 dB Bandwidth                                                     | Michael Ingerl      |
| AC Power Line Conducted Emissions                                   | Michael Ingerl      |
| Restricted Band Edges                                               | Michael Ingerl      |
| Exposure of Humans to RF Fields and SAR exclusion threshold         | Michael Ingerl      |

## 2 Test Details

### 2.1 Frequency Tolerance Under Temperature Variations

#### 2.1.1 Specification Reference

ISED Canada RSS-210 and ISED Canada RSS-GEN, Clause N/A and 6.11

#### 2.1.2 Equipment Under Test and Modification State

SE1, S/N: --- - Modification State 0

#### 2.1.3 Date of Test

2019-08-21

#### 2.1.4 Test Method

The EUT was set to transmit on maximum power with normal modulation. A frequency counter was used to measure the frequency error. The temperature was adjusted between - 20°C and +50°C.

#### 2.1.5 Environmental Conditions

Ambient Temperature 21.0 °C  
Relative Humidity 32.0 %

#### 2.1.6 Test Results

DC Powered 12 V – Transmitting continuously

| Temperature | Voltage   | kHz      |
|-------------|-----------|----------|
| - 20°C      | 12.0 V DC | 21.85812 |
| + 20°C      | 10.2 V DC | 21.85750 |
| + 20°C      | 12.0 V DC | 21.85750 |
| + 20°C      | 13.8 V DC | 21.85750 |
| + 50°C      | 12.0 V DC | 21.85750 |

### 2.1.7 Test Location and Test Equipment Used

This test was carried out in a non-shielded room.

| Instrument            | Manufacturer    | Type No | TE No | Calibration Period (months) | Calibration Due |
|-----------------------|-----------------|---------|-------|-----------------------------|-----------------|
| Spectrum Analyzer     | Rohde & Schwarz | FSV40   | 20219 | 12                          | 2020-01-31      |
| Climatic test chamber | ESPEC           | PL-2J   | 18843 | 24                          | 2020-03-31      |

**Table 6**

TU - Traceability Unscheduled

O/P Mon – Output Monitored using calibrated equipment

N/A - Not Applicable

## **2.2 Field Strength of any Emission**

### **2.2.1 Specification Reference**

FCC 47 CFR Part 15C, ISED Canada RSS-210 and ISED Canada RSS-GEN, Clause 15.209, 4.3 and 6.13

### **2.2.2 Equipment Under Test and Modification State**

SE1, S/N: --- - Modification State 0

### **2.2.3 Date of Test**

2019-08-20

### **2.2.4 Test Method**

This test was performed in accordance with ANSI C63.10, clause 6.3, 6.4 and 6.5. and ISED Canada RSS-Gen clause 6.13.

Measurements were made at a distance of 3 m. The limit lines shown on the plot were extrapolated from either 300 m or 30 m to the measurement distance of 3 m in accordance with ANSI C63.10 Clause 6.4.4.2.

For any emissions detected within 20 dB of the limit, a final measurement was made and recorded in the table below. The detector used for these measurements was a quasi-peak detector except for emissions within the bands 9 kHz to 90 kHz and 110 kHz to 490 kHz where a CISPR average detector was used.

### **2.2.5 Environmental Conditions**

|                     |         |
|---------------------|---------|
| Ambient Temperature | 22.0 °C |
| Relative Humidity   | 33.0 %  |

2.2.6 Test Results

DC Powered 12 V – Transmitting continuously

1. Orthogonal axis

## 2.3 20 dB Bandwidth

### 2.3.1 Specification Reference

FCC 47 CFR Part 15C, ISED Canada RSS-210 and ISED Canada RSS-GEN, Clause 15.215 (c), N/A and 6.6

### 2.3.2 Equipment Under Test and Modification State

SE1, S/N: --- - Modification State 0

### 2.3.3 Date of Test

2019-08-21

### 2.3.4 Test Method

The test was performed in accordance with ANSI C63.10, clause 6.9.1.

### 2.3.5 Environmental Conditions

Ambient Temperature 23.0 °C  
Relative Humidity 32.0 %

### 2.3.6 Test Results

DC Powered 12 V – Transmitting continuously

| Frequency (kHz) | 20 dB Bandwidth (kHz) | 99% Occupied Bandwidth (kHz) | F <sub>LOWER</sub> (kHz) | F <sub>UPPER</sub> (kHz) |
|-----------------|-----------------------|------------------------------|--------------------------|--------------------------|
| 21.85           | 20.80                 | 22.39                        | 17.58                    | 38.38                    |

**Table 11**

Product Service

Date: 21.AUG.2019 12:13:23

20 dB Bandwidth

Date: 21.AUG.2019 12:14:09

99% Occupied Bandwidth

FCC 47 CFR Part 15, Limit Clause 15.215 (c)

The 20 dB bandwidth of the emission, or whatever bandwidth may otherwise be specified in the specific rule section under which the equipment operates, is contained within the frequency band designated in the rule section under which the equipment is operated.

ISED Canada RSS 210 and ISED Canada RSS GEN, Limit Clause

None specified.

**2.3.7 Test Location and Test Equipment Used**

This test was carried out in a non-shielded room.

| Instrument            | Manufacturer    | Type No | TE No | Calibration Period (months) | Calibration Due |
|-----------------------|-----------------|---------|-------|-----------------------------|-----------------|
| Spectrum Analyzer     | Rohde & Schwarz | FSV40   | 20219 | 12                          | 2020-01-31      |
| Climatic test chamber | ESPEC           | PL-2J   | 18843 | 24                          | 2020-03-31      |

## **2.5 Restricted Band Edges**

### **2.5.1 Specification Reference**

FCC 47 CFR Part 15C, ISED Canada RSS-210 and ISED Canada RSS-GEN, Clause 15.205, 4.1 and 8.10

### **2.5.2 Equipment Under Test and Modification State**

SE1, S/N: --- - Modification State 0

### **2.5.3 Date of Test**

2019-08-20

### **2.5.4 Test Method**

This test was performed in accordance with ANSI C63.10, clause 11.13.1.

Plots for average measurements were taken in accordance with ANSI C63.10 clause 4.1.4.2.3.

Final average measurements were taken in accordance with ANSI C63.10 clause 4.1.4.2.2.

### **2.5.5 Environmental Conditions**

|                     |         |
|---------------------|---------|
| Ambient Temperature | 22.0 °C |
| Relative Humidity   | 33.0 %  |

### **2.5.6 Test Results**

DC Powered 12 V – Transmitting continuously

See chapter 2.2 for results.

FCC 47 CFR Part 15, Limit Clause 15.205

|                               | Peak (dBμV/m) | Average (dBμV/m) |
|-------------------------------|---------------|------------------|
| Restricted Bands of Operation | 74            | 54               |

**Table 15**

ISED Canada RSS-GEN, Limit Clause 8.9

| Frequency (MHz) | Field Strength (μV/m at 3 metres) |
|-----------------|-----------------------------------|
| 30-88           | 100                               |
| 88-216          | 150                               |
| 216-960         | 200                               |
| Above 960*      | 500                               |

**Table 16**

\*Unless otherwise specified, for all frequencies greater than 1 GHz, the radiated emission limits for licence-exempt radio apparatus stated in applicable RSSs (including RSS-Gen) are based on measurements using a linear average detector function having a minimum resolution bandwidth of 1 MHz. If an average limit is specified for the EUT, then the peak emission shall also be measured with instrumentation properly adjusted for such factors as pulse desensitization to ensure the peak emission is less than 20 dB above the average limit.

**2.5.7 Test Location and Test Equipment Used**

This test was carried out in Semi anechoic room - cabin no. 8.

| Instrument               | Manufacturer    | Type No   | TE No | Calibration Period (months) | Calibration Due |
|--------------------------|-----------------|-----------|-------|-----------------------------|-----------------|

| <p>The output power TP is the higher of the conducted or effective isotropic radiated power (e.i.r.p.):</p> <p style="text-align: center;"><math>TP = 0.219 \text{ mW}</math></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |            |                       |                          |           |  |  |                                     |                                     |

<sup>1</sup> The conversion formula is valid only for properly matched antennas. In other cases the transmitter output power may have to be measured by a terminated measurement when applying the exemption clauses. If an open area test site is used for field strength measurement, the effect due to the metal ground reflecting plane should be subtracted from the maximum field strength value in order to reference it to free space, before calculating TP.

| SAR evaluation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                              |       |       |       |       |       |       |       |       |        |                 |                                                              |          |                                     |  |  |  |  |  |  |  |       |       |       |       |       |       |       |       |       |        |                   |    |     |     |     |     |     |     |     |     |     |     |    |    |    |     |     |     |     |     |     |     |     |    |    |    |    |    |    |    |     |     |     |      |   |    |    |    |    |    |     |     |     |     |      |   |   |    |    |    |    |     |     |     |     |      |   |   |    |    |    |    |     |     |     |     |      |   |   |    |    |    |    |    |    |    |     |  |  |  |  |
| <p>SAR evaluation is required if the separation distance between the user and/or bystander and the antenna and/or radiating element of the device is less than or equal to 20 cm, except when the device operates at or below the applicable output power level (adjusted for tune-up tolerance) for the specified separation distance defined in the table.</p> <p>For controlled use devices where the 8 W/kg for 1 gram of tissue applies, the exemption limits for routine evaluation in the table are multiplied by a factor of 5. For limb-worn devices where the 10 gram value applies, the exemption limits for routine evaluation in the table are multiplied by a factor of 2.5. If the operating frequency of the device is between two frequencies located in the table, linear interpolation shall be applied for the applicable separation distance. For test separation distance less than 5 mm, the exemption limits for a separation distance of 5 mm can be applied to determine if a routine evaluation is required.</p> <p>For medical implants devices, the exemption limit for routine evaluation is set at 1 mW. The output power of a medical implants device is defined as the higher of the conducted or e.i.r.p to determine whether the device is exempt from the SAR evaluation.</p> <table border="1"> <thead> <tr> <th rowspan="2">Frequency (MHz)</th> <th colspan="10">Exemption limits (mW)<sup>2</sup> at separation distance of</th> </tr> <tr> <th>≤5 mm</th> <th>10 mm</th> <th>15 mm</th> <th>20 mm</th> <th>25 mm</th> <th>30 mm</th> <th>35 mm</th> <th>40 mm</th> <th>45 mm</th> <th>≥50 mm</th> </tr> </thead> <tbody> <tr> <td>≤300<sup>3</sup></td> <td>71</td> <td>101</td> <td>132</td> <td>162</td> <td>193</td> <td>223</td> <td>254</td> <td>284</td> <td>315</td> <td>345</td> </tr> <tr> <td>450</td> <td>52</td> <td>70</td> <td>88</td> <td>106</td> <td>123</td> <td>141</td> <td>159</td> <td>177</td> <td>195</td> <td>213</td> </tr> <tr> <td>835</td> <td>17</td> <td>30</td> <td>42</td> <td>55</td> <td>67</td> <td>80</td> <td>92</td> <td>105</td> <td>117</td> <td>130</td> </tr> <tr> <td>1900</td> <td>7</td> <td>10</td> <td>18</td> <td>34</td> <td>60</td> <td>99</td> <td>153</td> <td>225</td> <td>316</td> <td>431</td> </tr> <tr> <td>2450</td> <td>4</td> <td>7</td> <td>15</td> <td>30</td> <td>52</td> <td>83</td> <td>123</td> <td>173</td> <td>235</td> <td>309</td> </tr> <tr> <td>3500</td> <td>2</td> <td>6</td> <td>16</td> <td>32</td> <td>55</td> <td>86</td> <td>124</td> <td>170</td> <td>225</td> <td>290</td> </tr> <tr> <td>5800</td> <td>1</td> <td>6</td> <td>15</td> <td>27</td> <td>41</td> <td>56</td> <td>71</td> <td>85</td> <td>97</td> <td>106</td> </tr> </tbody> </table> |                                                              |       |       |       |       |       |       |       |       |        | Frequency (MHz) | Exemption limits (mW) <sup>2</sup> at separation distance of |          |                                     |  |  |  |  |  |  |  | ≤5 mm | 10 mm | 15 mm | 20 mm | 25 mm | 30 mm | 35 mm | 40 mm | 45 mm | ≥50 mm | ≤300 <sup>3</sup> | 71 | 101 | 132 | 162 | 193 | 223 | 254 | 284 | 315 | 345 | 450 | 52 | 70 | 88 | 106 | 123 | 141 | 159 | 177 | 195 | 213 | 835 | 17 | 30 | 42 | 55 | 67 | 80 | 92 | 105 | 117 | 130 | 1900 | 7 | 10 | 18 | 34 | 60 | 99 | 153 | 225 | 316 | 431 | 2450 | 4 | 7 | 15 | 30 | 52 | 83 | 123 | 173 | 235 | 309 | 3500 | 2 | 6 | 16 | 32 | 55 | 86 | 124 | 170 | 225 | 290 | 5800 | 1 | 6 | 15 | 27 | 41 | 56 | 71 | 85 | 97 | 106 |  |  |  |  |

<sup>2</sup> The exemption limit in the table are based on measurements and simulations on half-wave dipole antennas at separation distances of 5 mm to 25 mm from a flat phantom, providing a SAR value of approximately 0.4 W/kg for 1 g of tissue. For low frequencies (300 MHz to 835 MHz), the exemption limits are derived from a linear fit. For high frequencies (1900 MHz and above), the exemption limits are derived from a third order polynomial fit.

<sup>3</sup> Transmitters operating between 3 kHz and 10 MHz, meeting the exemption from routine SAR evaluation, shall demonstrate compliance to the instantaneous limits in IC RSS-102, issue 5, section 4.

| <b>Comment:</b>        | The nerve stimulation exposure limit is defined for the frequency range 3 kHz to 10 MHz, only. Thus, the carrier at 21.85 kHz was evaluated, only. |

## SAR Exclusion threshold

|                                                                              |                                                                                |
|------------------------------------------------------------------------------|--------------------------------------------------------------------------------|
| Maximum Radiated Fields Strength:<br>(see chapter 2.1.6 of this test report) | 80.32 dBμV/m<br>(at 10 m distance and 21.85 kHz)                               |
| Calculated Equivalent Radiated Power:                                        | 0.219 mW (e.i.r.p.) < 0.3 mW                                                   |
| Minimum separation distance:                                                 | 5 mm (≤ 50 mm)                                                                 |
| 1-g numeric threshold:                                                       | $(1 \text{ mW} / 5 \text{ mm}) \cdot \sqrt{(0.00002185 \text{ GHz})} = 0.0009$ |
| 1-g numeric threshold limit:                                                 | 0.001                                                                          |

Note 1: For test distances below 5 mm according to 4.3.1 c) the test distance is fixed to 5 mm.

$$EIRP = \frac{(FS \cdot D)^2}{30}$$

## 2.6.6 Test Location and Test Equipment Used

This test was carried out in a non-shielded room.

| Instrument                      | Manufacturer | Type No   | TE No | Calibration Period (months) | Calibration Due |
|---------------------------------|--------------|-----------|-------|-----------------------------|-----------------|
| Electromagnetic radiation meter | Narda Safety | EMR-200   | 19590 | 36                          | 2019-10-31      |
| Electric field probe            | Narda Safety | Type 8.3  | 19591 | 36                          | 2019-10-31      |
| Magnetic field probe            | Narda Safety | Type 12.1 | 19592 | 36                          | 2019-10-31      |
| Exposure level tester           | Narda Safety | ELT-400   | 19725 | 24                          | 2020-06-30      |

Table 18

### 3 Measurement Uncertainty

For a 95% confidence level, the measurement uncertainties for defined systems are:

| Radio Testing                           |      |                       |      |
|-----------------------------------------|------|-----------------------|------|
| Test Name                               | kp   | Expanded Uncertainty  | Note |
| Occupied Bandwidth                      | 2.0  | ±1.14 %               | 2    |
| RF-Frequency error                      | 1.96 | ±1 · 10 <sup>-7</sup> | 7    |
| RF-Power, conducted carrier             | 2    | ±0.079 dB             | 2    |
| RF-Power uncertainty for given BER      | 1.96 | +0.94 dB / -1.05      | 7    |
| RF power, conducted, spurious emissions | 1.96 | +1.4 dB / -1.6 dB     | 7    |
| RF power, radiated                      |      |                       |      |
| 25 MHz – 4 GHz                          | 1.96 | +3.6 dB / -5.2 dB     | 8    |
| 1 GHz – 18 GHz                          | 1.96 | +3.8 dB / -5.6 dB     | 8    |
| 18 GHz – 26.5 GHz                       | 1.96 | +3.4 dB / -4.5 dB     | 8    |
| 40 GHz – 170 GHz                        | 1.96 | +4.2 dB / -7.1 dB     | 8    |
| Spectral Power Density, conducted       | 2.0  | ±0.53 dB              | 2    |
| Maximum frequency deviation             |      |                       |      |
| 300 Hz – 6 kHz                          | 2    | ±2,89 %               | 2    |
| 6 kHz – 25 kHz                          | 2    | ±0.2 dB               | 2    |
| Maximum frequency deviation for FM      | 2    | ±2,89 %               | 2    |
| Adjacent channel power 25 MHz – 1 GHz   | 2    | ±2.31 %               | 2    |
| Temperature                             | 2    | ±0.39 K               | 4    |
| (Relative) Humidity                     | 2    | ±2.28 %               | 2    |
| DC- and low frequency AC voltage        |      |                       |      |
| DC voltage                              | 2    | ±0.01 %               | 2    |
| AC voltage up to 1 kHz                  | 2    | ±1.2 %                | 2    |
| Time                                    | 2    | ±0.6 %                | 2    |

| Voltage Dips, Short Interruptions and Voltage Variations |      |                      | 4    |
| Oscillatory Waves                                        |      |                      | 4    |
| Conducted Low Frequency Disturbances                     |      |                      |      |
| Voltage setting                                          | 2    | ± 0.9 %              | 2    |
| Frequency setting                                        | 2    | ± 0.1 %              | 2    |
| Electrical Transient Transmission in Road Vehicles       |      |                      | 4    |

**Table 21**

Note 1:

The expanded uncertainty reported according to CISPR 16-4-2:2003-11 is based on a standard uncertainty multiplied by a coverage factor of  $k_p = 2$ , providing a level of confidence of  $p = 95.45\%$

Note 2:

The expanded uncertainty reported according to UKAS Lab 34 (Edition 1, 2002-08) is based on a standard uncertainty multiplied by a coverage factor of  $k_p = 2$ , providing a level of confidence of  $p = 95.45\%$

Note 3:

The expanded uncertainty reported according to UKAS Lab 34 (Edition 1, 2002-08) is based on a standard uncertainty multiplied by a coverage factor of  $k_p = 2.05$ , providing a level of confidence of  $p = 95.45\%$

Note 4:

It has been demonstrated that the used test equipment meets the specified requirements in the standard with at least a 95%confidence.

Note 5:

The expanded uncertainty reported according to IEC 61000-4-3 is based on a standard uncertainty multiplied by a coverage factor of  $k_p = 2$ , providing a level of confidence of  $p = 95.45\%$

Note 6:

The expanded uncertainty reported according to IEC 61000-4-6 is based on a standard uncertainty multiplied by a coverage factor of  $k_p = 2$ , providing a level of confidence of  $p = 95.45\%$

Note 7:

The expanded uncertainty reported according ETSI TR 100 028 V1.4.1 (all parts) to is based on a standard uncertainty multiplied by a coverage factor of  $k_p = 1.96$ , providing a level of confidence of  $p = 95.45\%$

Note 8:

The expanded uncertainty reported according to ETSI TR 102 273 V1.2.1 (all parts) is based on a standard uncertainty multiplied by a coverage factor of  $k_p = 1.96$ , providing a level of confidence of  $p = 95.45\%$
