To whom it may concern,

With this letter, we apply for a FCC C2PC and an ISED C4PC for the QCNCM865 module.

**FCC ID:** J9C-QCNCM865 (Original Grant date: 04/05/2023)

**ISED Certification Number:** 2723A-QCNCM865 (Original approval date: 07/27/2024)

Below are the main aspects of this application:

- This application is to allow use of the above module in a portable host. The modular approval only covers mobile hosts and therefore requires a C2PC for FCC and a C4PC for ISED Canada to allow use of the module in the portable host(s) covered in this application. Host brand and model name(s) are described in the test report(s) submitted with this application.
- The antenna used in this host computer is of the same type and with equal or lower gain to previously approved antennas. For this reason, no RF reports are being provided to address spurious emission as these are addressed by the original filing of the module.
- The module integrated host system(s) has been checked in accordance with the KDB996369D04 for radiated spurious emissions to be compliant.
- The power reduction is required to this host to comply SAR requirement. A new tuning power table reflecting the power reduction is being submitted with this application.
- Software security remains unchanged from the original filing

Please kindly review and grant approval to this application.

Sincerely Yours,

Stanley Lin
