

Cover Letter for FCC Application

Graco, Inc. is submitting the 17U762 for FCC original certification. The rule being applied for is 15.231.

Graco, Inc. builds the 17U762 which incorporates a 433.92 MHz crystal oscillator that sets the center frequency, a microcontroller that sets the control data packet and an amplifier circuit that is used to modulate control data via on-off keying (OOK). The modulated signal uses a custom made antenna that is permanently attached via a solder joint. All test data was captured by the same certified body, Element Materials Technology, and at the same facility. Each individual test report completely details the test conditions and test samples used.
