

Operational Description

The transmitter of the EUT (Cordless Keyboard) is powered by 3VDC battery. The antenna is Loop Antenna. The output power of this device is very low. This equipment is a 2-channel equipment with frequency 27.095 MHz, 27.145MHz that operating frequency is 2nd harmonic of the generating Xtal frequency. Under normal use condition, the transmitter and the receiver are quite close, so high EIRP power is neither necessary nor allowed because of interference.
