Request for Confidentiality

Grantee Code:

JOM

Equipment Product Code

RFBDA-418

Confirmation Number

EA93471

This document is intended to serve as a request for confidentiality made by PQ Controls, Inc. pursuant to Item 8 of FCC form 731 Application for Equipment Authorization.

It is our request that the documents and/or drawings listed below not be made routinely available for public inspection, being that the information contained within reflects a substantial monetary and intellectual investment and may reveal certain trade secrets that can assist competing firms in the development of same or similar products. It is our position that such a condition has the potential to reduce the return on the aforementioned investment by allowing competitors to use our intellectual property without having shared any financial risk or development costs. It is also our request that the FCC keep the referenced documents confidential for a period of 3 years starting from the date of authorization. Justification for this 3-year period lies in PQ Control's expectations for product life span and return on investment.

The information contained within the above referenced documents is currently not available to the general public and has been made available only to our testing firm, Dayton T. Brown, Inc., and the FCC in the course of our filing for authorization.

Affected Document (s)

Schematic Drawing # D-09555, Rev. C, Title: "418 MHz UHF Receiver"

Prepared By:

Mark A. Caterino, Design Engineer

A handwritten signature in black ink, appearing to read 'Mark A. Caterino', is written over a horizontal line.
