2-1-1 Kagahara, Tsuzuki-ku, Yokohama-shi, Kanagawa 224-8502, Japan

Attestation letter for 201K(FCCID: JOY201K)

We hereby declares this device supports below information,

- a) Submit a channel/frequency plan for this device showing the channels that have active scanning or passive scanning. Active scanning is where the device can transmit a probe (beacon) and passive scanning is where the device is can listen only with no probes.
⇒ **Please refer to device description table on the attached page.**
- b) Verify that this device does not have ad-hoc mode
⇒ **Please refer to device description table on the attached page.**
- c) Can this device act as an access point on the non-DFS legacy frequencies (5.15-5.25 MHz)
⇒ **Please refer to device description table on the attached page.**
- d) For client devices that have software configuration control to operate in different modes (active scanning in some and passive scanning in others) in different bands (devices with multiple equipment classes or those that operate on non-DFS frequencies) or modular devices which configure the modes of operations through software, the application must provide software and operations description on how the software and / or hardware is implemented to ensure that proper operations modes cannot be modified by end user or an installer.
⇒ **Please refer to device description table on the attached page and for NII frequencies, this device can operate as a client only.**
The client software and associated drivers will not initiate any transmissions on DFS frequencies, which includes the transmissions for beacons, ad-hoc and peer-to-peer modes.
The software is locked by the manufacturer, so the settings cannot be changed or modified by the end user of the device.

Sincerely,

Signature

Responsible Name

Yoshikazu Yamamoto
