

POWER LIMITATION PURSUANT TO FCC RULE PART 90

The JR9-VT20SALCD has two power output options, 12.0 Watts and 2.0 Watts, maximum.

The power limit for FCC Rule Part 90 operation is 2.0 Watts maximum. This will be set by the internal wiring of the keypad switch for part 90 users.

For all other users, in the spirit of "transmitting the minimum amount of power necessary to communicate" this will be a keypad switch option.
