

- 1.) Kindly supply an exact label artwork drawing for this device as it shall be labeled for sale.

[Please ignore the original label location, because the manufacturer stuck the FCC ID label to receiver. Now they have revised it.](#)

[The revised label location downloaded to web site.](#)

[Besides, the internal photos are correct.](#)

- 2.) FYI: There is an incorrect interpretation of the permissible limits for spurious emissions for this device. Whenever the Restricted Band emission limits are higher than the limits as applied in any specific Intentional Radiator section, the stricter limits will apply. For this case, all spurious emissions must meet the 52.8dB_{AV} average limit, and not the limits shown in 15.205. This does not appear to change the pass/fail radiated emissions criteria, but should be changed for clarity. .
