Correspondence Ref. #17453

Per your inquiry:

- 1) Reference to .5 in the technical description section of the test report is a typo and will be corrected to read .3 W. User manual and measured .3 ERP is correct. The alignment procedure reference to .5W is not ERP but is conducted power because in quality assurance it is not practical to measure ERP on each unit. .5W conducted power translates into .3W ERP.
- 2) Push-to-talk devices, per Kwok Chan, duty factor inherently does not exceed 50%. Revised user instructions containing Safety Information has been uploaded via add attachments.
