Luran® S **Product Information** 

797 S

04/2008 **ASA** 

#### **Product description**

Grade with especially high notched impact strength (eg for lighting covers, lawn mower housings).

## Physical form and storage

Luran® S is delivered in the form of cylindrical or spherical pellets. The bulk density of the pellets is from 0.55 to 0.65 g/cm³. Values may differ for special grades. Standard Packaging unit: 25 kg PE-bag on palette, shrunk or wrapped with PE film. In addition, delivery in larger units of up to 1000 kg (IBC = Intermediate Bulk Container) or silo trucks can be arranged. In dry areas with normal temperature control, Luran® S pellets can be stored for relatively long periods of time without any change in mechanical properties. With unstable colours, however, storage over a number of years can give rise to some change in colour. Under poor storage conditions, Luran® S absorbs moisture, but this can be removed by drying.

## **Product safety**

No adverse effects on the health of processing personnel have been observed where the products are correctly processed and the production areas are suitably ventilated.

For styrene, acrylonitrile, and butyl acrylate the maximum allowable workplace concentrations must be observed according to the pertaining national regulations. In Germany, the following limit values are valid TRGS 900 (Aug.2004): styrene, MAK-value: 20 ml/m³; acrylonitrile, TRK-value: 3 ml/m³, and butyl acrylate, MAK-value: 2 ml/m³. According to EU directive 67/548/EEC, Annex I (2001), acrylonitrile is classified as carcinogenic, category 2 ('substances which should be regarded as if they are carcinogenic to man).

Experience has shown that when Luran S is processed correctly with appropriate ventilation, the levels are far below the

limits mentioned above.

Inhalation of the vapours of degradation products which can arise on severe overheating of the materials or during purging out should be avoided. Our Luran S safety data sheets give further information. These can be downloaded from the Plastics Portal, www.plasticsportal.net.

#### Note

The data contained in this publication are based on our current knowledge and experience. In view of the many factors that may affect processing and application of our product, these data do not relieve processors from carrying out their own investigations and tests; neither do these data imply any guarantee of certain properties, nor the suitability of the product for a specific purpose. Any descriptions, drawings, photographs, data, proportions, weights etc. given herein may change without prior information and do not constitute the agreed contractual quality of the product. It is the responsibility of the recipient of our products to ensure that any proprietary rights and existing laws and legislation are observed. In order to check the availability of products please contact us or our sales agency.
