### **CONCLUSION**

The submitted product was deemed to have **COMPLIED** with the requirements of Federal Communications Commission [FCC] Rules and Regulations Part 15. The tests were performed in accordance with the standards described above and on Section 2.2 in this Test Report.

| Input Voltage: | 9Vd.c ("6F22" size battery x 1) |

#### **1.3.1 Description of EUT Operation**

The Equipment Under Test(EUT) is a DSI (HK) Ltd., 49.86MHz Walkie Talkie. The transmitter is a 1 button transmitter. The EUT continues to transmit while button is being pressed. It is voice transmission, Modulation by Mic. and tape is frequency modulation.

| Test Date:         | 2001-05-21       |
| Mode of Operation: | On mode          |

**Test Method:**

The sample was placed 0.8m above the ground plane on the OATS \*. Measurements in both horizontal and vertical polarities were performed. During the test, each emission was maximized by: having the EUT continuously working, investigate all operating modes, rotated about all 3 axis (X, Y & Z) to obtain worst position, manipulating interconnecting cables, rotating turntable, varying antenna height from 1m to 4m in both horizontal and vertical polarizations. The emissions worst-case are shown in Test Results of the following pages.

\*: OATS [Open Area Test Site] located at HKSTC with a metal ground plane on filed with the FCC pursuant to section 2.948 of the FCC rules, with Registration Number: 90657.

**Test Setup:**

Date: 2001-05-22

## **TEST REPORT**

Page 10 of 20

No.: HM104827

### **Limits for Field Strength of Fundamental Emissions [FCC 47CFR 15.235]:**

| Frequency Range of Fundamental<br>[MHz] | Field Strength of Fundamental Emission<br>[Peak]<br>[μV/m] | Field Strength of Fundamental Emission<br>[Average]<br>[μV/m] |
|---|--|---|
| 49.82-49.90                             | 100,000  | 10,000  |

### **Results:**

| Field Strength of Fundamental Emissions<br>Peak Value |                   |                           |                          |                        |                         |                  |
|---|-------------------|---------------------------|--------------------------|------------------------|-------------------------|------------------|
| Frequency<br>MHz                                      | Level @3m<br>dBμV | Correction Factor<br>dB/m | Field Strength<br>dBμV/m | Field Strength<br>μV/m | Limit **<br>@3m<br>μV/m | Antenna Polarity |
| 49.86   | 32.1              | 15.0                      | 47.1                     | 226.5                  | 100,000                 | Vertical         |

According to FCC 47CFR15.35, the limit on the radio frequency emissions as measured using instrumentation with a peak detector function, corresponding to 20dB above the maximum permitted average limit for the frequency being investigated unless a different peak emission limit is otherwise specified in the rules.

### **Remarks:**

\*: Linear interpolations

Correction Factor included Antenna Factor and Cable Attenuation.

Calculated measurement uncertainty = 30MHz to 300MHz ±3.7dB  
300MHz to 1GHz +3.0dB / -2.7dB

**No.: HM104827**

For effective averaging, the bandwidth of the video filter must be smaller than the resolution bandwidth. The higher the ratio of resolution bandwidth to video bandwidth, the greater the averaging will be recorded. Below setting for HP8572A EMI Receiver.

Video Bandwidth = 1Hz

## **TEST REPORT**

Page 12 of 20

No.: HM104827

### **Limited for Radiated Emissions [FCC 47 CFR 15.209 Class B]:**

| Frequency Range<br>[MHz] | Quasi-Peak Limits<br>[μV/m] |
|--------------------------|-----------------------------|
| 30-88                    | 100                         |
| 88-216                   | 150                         |
| 216-960                  | 200                         |
| Above 960                | 500                         |

The emission limits shown in the above table are based on measurement employing a CISPR quasi-peak detector and above 1000MHz are based on measurements employing an average detector.

### 3.1.1 Conducted Emissions (0.45MHz to 30MHz)

|                    |                  |
|--------------------|------------------|
| Test Requirement:  | FCC 47CFR 15.207 |
| Test Method:       | ANSI C63.4:1992  |
| Test Date:         | 2001-05-21       |
| Mode of Operation: | On mode          |

#### Test Method:

The test was performed in accordance with ANSI C63.4:1992, with the following: an initial measurement was performed in peak and average detection mode on the live line. Any emissions recorded within 30dB of the relevant limit line were re-measured using quasi-peak and average detection on the live and neutral lines with the worst case recorded in the table of results.

#### Test Setup:

Date: 2001-05-22

## **TEST REPORT**

Page 15 of 20

No.: HM104827

Limit for Conducted Emissions (FCC 47 CFR 15.207):

| Frequency Range<br>[MHz] | Quasi-Peak Limits<br>[μV/m] |
|--------------------------|-----------------------------|
| 0.45-30                  | 250                         |

Limits for Conducted Emissions Test, please refer to limit lines (Quasi-Peak and Average) in the following diagram labelled as (QP and AV).

|  |
|--|
| <b>Results:</b> <b>N/A</b>   |
| <b>The EUT is operated by internal battery power only, therefore power line conducted emission was deemed unnecessary.</b> |

Remarks:

Calculated measurement uncertainty =  $\pm 2.3\text{dB}$

### **3.2 26dB Bandwidth of Fundamental Emission**

|                    |                                  |
|--------------------|----------------------------------|
| Test Requirement:  | FCC 47 CFR 15.235                |
| Test Method:       | ANSI C63.4:1992 (Section 13.1.7) |
| Test Date:         | 2001-05-21                       |
| Mode of Operation: | On mode                          |

#### **Test Method:**

The bandwidth is measured at an amplitude level reduced from the reference level by a specified ratio. The reference level is the level of the highest amplitude signal observed from the transmitter at the fundamental frequency. Once the reference level is established, the equipment is conditioned with typical modulating signal to produce the worst-case (i.e. the widest) bandwidth.

#### **Test Setup:**

As Test Setup of clause 3.1.1 in this test report.

Date: 2001-05-22
