Please revise to also include a demonstration of compliance with the timing requirement specified in Section 15.519(a)(1) and RSS-220)5.3.1b).

Response: The duty cycle / emission detailed in section 4.2.1 of the test report demonstrates compliance with these requirements. The EUT's full transmission (one pulsed frame in response to an external pulse inquiry) is depicted. The EUT does not transmit unless it receives a paired, encoded UWB transmission. The EUT responds to that transmission with a single pulsed frame, as noted in the test report.
