

Request for Confidentiality (KTF406-ELT)

In accordance with the FCC Rules and Regulations, 47CFR0.459, DME Corporation requests that portions of the material submitted for Type Approval of the 406MHz Emergency Locator Transmitter (KTF406-ELT) remain confidential. This request is made due to the unique design and performance of the above listed ELT.

The DME 406MHz Emergency Locator Transmitter (406 ELT) is uniquely designed for installation and automatic deployment into both General Aviation and Commercial life rafts and slide rafts. The housing was specifically designed to meet these needs. Subsequently, the circuitry of the 406 ELT is unique to this design. Therefore, disclosure of identified material would result in substantial competitive harm to DME Corporation.

As DME Engineering incurred significant expenses in cost, time and effort to produce this design, it is DME's request that this information remains confidential. The corresponding documents to this request have either been separated or marked accordingly. These documents include drawings, schematics and technical manuals related to the 406 ELT.

Sincerely,

Michael Wooster
Program Manager, DME Corporation
