This technical cutaway diagram illustrates the internal architecture of a server rack, highlighting its liquid cooling system. At the top, a yellow and black cooling unit is connected to a network of pipes. A prominent green liquid loop runs vertically through the center of the rack, passing through various electronic modules. These modules include several server units with fans, a power supply unit, and a network switch. The bottom section features a complex manifold with two large blue pumps and various valves, connected to the green loop. The entire system is housed within a metal frame, with blue dashed lines indicating the top and bottom of the rack structure.
