

## **System Description**

2001 Navistar RKE Receiver Module Yazaki North America P/N: 3817900-270,  
Navistar P/N: 35449337c2

The RKE Receiver Module consists of the housing and the main module, which consists of receiver, decoder, and a microcontroller. The internal antenna and receiver receives the low-level RF signal and sends data to the decoder. The decoder decodes the signal and sends it to the microcontroller. The microcontroller sends the J1708 message on the bus to activate the Lock, Unlock, Panic, or Auxiliary functions.
