

Re: FCC ID L2C0023TR  
Applicant: Delphi Delco Electronics Systems  
Correspondence Reference Number: 28387  
731 Confirmation Number: EA384397

The following is in response to the questions raised on the above application:

FCC Equipment Authorization System

1) Short term confidentiality cannot be granted for a period of 8 months. An initial term of 45 days is issued with extensions with justification up to 180 days maximum. You need to contact Rich Fabina a week before the end of each 45 day period to provide justification for an extension. Please confirm.

Yes, this will be sufficient. We will contact Rich Fabina at the end of each 45 day period so long as we desire the internal photos to remain confidential, with confidentiality removed no greater than 180 days from the date of the grant.

2) For UWB devices, a 20 dB/decade extrapolation factor must be used. If the device cannot be modified and a corrected test report submitted, then the device will be denied. You must use(purchase or lease) equipment that will be needed for the measurements.

The measurement system and configuration (including measurement distance) should have enough sensitivity to demonstrate compliance of the device at the limits specified.

A modified radar has been fully re-tested and determined to comply with the FCC regulations using the aforementioned 20 dB/decade criterion. Because small modifications were made to the DUT by the manufacturer, some updated exhibits, in addition to the new test report, have been uploaded.

We look forward to your review of the updated application. If possible, please provide us with feedback as quick as possible due to time constraints at our end.

Thank you,

JDB
