

Fan-25T Transmitter Operation Description

When Fan-25T Transmitter uses DC 6V battery, the power will go through HT 7130 IC to provide MCU 49R 50 power.

When MCU 49R 50 starts working then the LCD panel will show initial picture status. Press the control key on the Transmitter to decide what kind control function you want. Then the Transmitter will transmit through the Signal Encoding and R.F. Modal to send the selected command to the Receiver.
