

From FCC Part 15.231(e), Devices operated under the provisions of this section shall be provided with a means for automatically limiting operation so that the duration of each transmission shall not be greater than one second and the silent period between transmissions shall be at least 30 times the duration of the transmission but in no case less than 10 seconds.

Since the EUT of each transmission is 700 msec. so the silent period must not less than 21 sec. (700 msec x 30)

Figure 1 and 2 show the duration of each transmission 700 msec and silent period. (30.3 sec.)
