Subject: Ansen application FCC ID L5CW026-H MT#14813

Alice, I have one question about the operation which may require additional testing. The Schematic and Users manual (and photo) indicate that this device can operate on 1 of 3 channels. However, there is no information about the frequencies of operation of each channel. If the band of operation is greater than 1MHz, then FCC 15.31 (m) requires testing more channels. Please provide the frequency for each of the available channels of this device, as well as any other information that may be required if the frequencies of operation is a span wider than 1MHz.

Best regards,

Chris Harvey
