

Exhibit M:

L5X-PMP-01-280

Measured Frequency Stability

This Exhibit provides a response to Section 2.1055, based on the requirements specified in Section 101.107.

(a)The frequency stability shall be measured with variation of ambient temperature as follows:

(1) From -30 degrees to +50 degrees centigrade...

P-COM Test Results for Sector Terminal Outdoor Unit Frequency Stability

Purpose: Long-term frequency stability of the Sector ODU is compliant to product specifications at room and elevated temperatures. This test is conducted at RF.

Pass Criteria: Based on measurements every 15 minutes over a 45 minute period, the frequency deviation shall be within ± 1 ppm.

Test Environment: **P-COM Engineering Laboratory.**

Equipment: **One Sector Terminal, Frequency Counter (HP 53152A), Environmental Chamber.**

Sector Terminal Outdoor Unit Tests Results

Test Frequency: 27,500 MHz

Test Time	Temperature	Measured Frequency
0 min.	Room Temp	27,500,013,050
15 min.		27,500,012,980
30 min.		27,500,013,082
45 min.		27,500,013,110
0 min.	-30°C	27,500,013,270
15 min.		27,500,013,330
30 min.		27,500,013,060
45 min.		27,500,013,050
0 min.	50°C	27,500,013,000
15 min.		27,500,012,930
30 min.		27,500,012,920
45 min.		27,500,013,080

- ❑ Measured frequency deviation from Test Freq. at -30°C: +13.33 KHz
- ❑ Measured frequency deviation from Test Freq. at +0°C: +13.27 KHz
- ❑ Measured frequency deviation from Test Freq. at +50°C: +13.08 KHz
- ❑ Measured frequency drift across full temperature range): 410 Hz
