Refer to the test report for worst-case duty cycle factor. Timing plots show ON-time of 15.6ms per 100ms.

This duty-cycle allows a correction factor of -8.06dB.

Source based time averaged Conducted Output Power = 8.31mW

Source based time averaged EIRP = 13.2mW

Low threshold for SAR exemption = $60/f(\text{GHz}) = 65.08\text{mW}$

Since both source based time averaged EIRP and conducted output power is $< 60/f(\text{GHz})$ SAR exemption threshold, device complies with FCC and IC RF radiation exposure limits for general population/uncontrolled exposure as a portable device without SAR.
