Dates of Test Feb 7 to March 22, May 6 to May 24 and June 14, 2011

FCC ID: L6ARDU70CW IC: 2503A-RDU70CW FCC ID: L6ARDE70UW IC: 2503A-RDE70UW

Statement of Performance:

The BlackBerry[®] smartphone, model RDU71CW, part number CER-32268-001 Rev 4 and accessories performs within the requirements of the test standards when configured and operated per RIM's instructions.

The BlackBerry[®] smartphone, model RDE71UW, part number CER-21958-001 Rev 1 and accessories performs within the requirements of the test standards when configured and operated per RIM's instructions.

Declaration:

We hereby certify that:

The test data reported herein is an accurate record of the performance of the sample(s) tested. The test results are valid for the tested unit (s) only. The test equipment used was suitable for the tests performed and within manufacturer's published specifications and operating parameters. The test methods were consistent with the methods described in the relevant standards.

Test Report No. RTS-3933-1105-43A **Dates of Test** Feb 7 to March 22, May 6 to May 24 and June 14, 2011

FCC ID: L6ARDU70CW IC: 2503A-RDU70CW FCC ID: L6ARDE70UW IC: 2503A-RDE70UW

G) Summary of Results

The following test configurations were measured for model RDU71CW:

1) Conducted Emission Measurements

a) The BlackBerry® smartphone met the requirements of the Tx Conducted Spurious Emissions requirements in the GSM850 as per 47 CFR 2.1051, CFR 22.917, CFR 22.901(d) and RSS-GEN, 4.9. The EUT was measured on the low, middle and high channels. The frequency range investigated was from 10 MHz to 10 GHz.

See APPENDIX 1A for test data.

The BlackBerry® smartphone met the requirements of the Tx Conducted Spurious Emissions requirements in the PCS1900 as per 47 CFR 2.1051, CFR 24.238(a) and RSS-GEN, 4.9. The EUT was on the low, middle and high channels. The frequency range investigated was from 10 MHz to 20 GHz.

See APPENDIX 1A for test data

b) The BlackBerry® smartphone met the requirements of the Occupied Bandwidth and channel mask requirements in the GSM850 as per 47 CFR 2.202, CFR 22.917 and RSS-GEN, 4.6. The EUT was measured in GSM and EDGE mode on the low, middle and high channels. The worst case occupied bandwidth was 246.7 kHz on high channel in GSM mode, and 246.7 kHz on high channel in EDGE mode. See APPENDIX 1A for test data.

The BlackBerry® smartphone met the requirements of the Occupied Bandwidth and channel mask requirements in the PCS1900 as per 47 CFR 2.202, CFR 24.238 and RSS-GEN, 4.6. The EUT was measured in GSM and EDGE mode on the low, middle and high channels. The worst case occupied bandwidth was 245.0 kHz on low channel in GSM, and 245.0 kHz on middle and high channel in EDGE mode.

See APPENDIX 1A for test data.

c) The BlackBerry® smartphone met the requirements of the Tx Conducted RF output Power requirements in the GSM850 as per 47 CFR 2.1046, and RSS-GEN. 4.4. The EUT was measured on the low, middle and high channels. The frequency range investigated was from 10 MHz to 10 GHz.

See APPENDIX 2A for test data.

The BlackBerry® smartphone met the requirements of the Tx Conducted RF output Power requirements in the PCS1900 as per 47 CFR 2.1046, and RSS-GEN, 6.4.

Test Report No. RTS-3933-1105-43A

Dates of TestFeb 7 to March 22, May 6 to May 24 and June 14, 2011

FCC ID: L6ARDU70CW IC: 2503A-RDU70CW FCC ID: L6ARDE70UW IC: 2503A-RDE70UW

The EUT was on the low, middle and high channels. The frequency range investigated was from 10 MHz to 20 GHz. See APPENDIX 2A for test data

d) The BlackBerry[®] smartphone met the requirements of the Frequency Satbility requirements in the GSM850 as per 47 CFR 2.1055, CFR 22.917 and RSS-GEN, 4.3. The EUT was measured in GSM850 mode on the low, middle and high channels.

See APPENDIX 3A for test data.

The BlackBerry[®] smartphone met the requirements of the Frequency Satbility requirements in the PCS1900 as per 47 CFR 2.1055, CFR 24.235 and RSS-GEN, 4.7. The EUT was measured in PCS1900 mode on the low, middle and high channels.

See APPENDIX 3A for test data.

e) The EUT met the requirements of the Conducted Spurious Emissions in the Cellular band as per 47 CFR 22.917, CFR 22.901(d) and RSS-132. The EUT was measured in Loopback and 1xEVDO mode on the low, middle and high channels. The frequency range investigated was from 10 MHz to 10 GHz. See APPENDIX 1B for the test data.

The BlackBerry® smartphone met the requirements of the Conducted Spurious Emissions in the CDMA PCS band as per 47 CFR 2.1057, CFR 24.238 and RSS-133. The EUT was measured in Loopback and 1xEVDO mode on the low, middle and high channels. The frequency range investigated was from 10 MHz to 20 GHz See APPENDIX 1B for the test data.

f) The BlackBerry[®] smartphone met the requirements of the Occupied Bandwidth in the CDMA Cellular band as per 47 CFR 2.202, CFR 22.917 and RSS-132. The EUT was measured in Loopback and 1xEVDO mode on the low, middle and high channels. The worst case occupied bandwidth was 1.280 MHz on high channel in Loopback mode and 1.273 MHz on low and high channel in 1xEVDO mode. See APPENDIX 1B for the test data.

The BlackBerry® smartphone met the requirements of the Occupied Bandwidth and channel mask in the CDMA PCS band as per 47 CFR 2.202, CFR 24.238 and RSS-133. The EUT was measured in Loopback and 1xEVDO mode on the low, middle and high channels. The worst case occupied bandwidth was 1.280 MHz on middle channel in Loopback mode and 1.280 MHz on high channel in 1xEVDO mode..

See APPENDIX 1B for the test data.

FCC ID: L6ARDU70CW IC: 2503A-RDU70CW FCC ID: L6ARDE70UW IC: 2503A-RDE70UW

- g) The BlackBerry[®] smartphone met the requirements of the Conducted RF Output Power for both the CDMA Cellular and PCS bands. The EUT was measured in Loopback and 1xEVDO mode on the low, middle and high channels See APPENDIX 2B for test data.
- h) The BlackBerry[®] smartphone met the requirements of the Frequency Stability vs. Temperature and Voltage for CDMA Cellular band as per 22.917 and RSS-132. The EUT was measured in Cellular mode on the low, middle and high channels. See APPENDIX 3B for test data.

The BlackBerry[®] smartphone met the requirements of the Frequency Stability vs. Temperature and Voltage requirements for the PCS band as per 24.235 and RSS-133. The EUT was measured in CDMA PCS mode on the low, middle and high channels.

See APPENDIX 3B for test data.

The following test configurations were measured for model RDE71UW:

i) The BlackBerry[®] smartphone met the requirements of the Conducted Spurious Emissions in the UMTS band 5 as per 47 CFR 2.1057, CFR 22.917, CFR 22.901(d) CFR 22.901(d) and RSS-GEN, 4.9. The EUT was measured in Loopback and HSUPA mode on the low, middle and high channels. The frequency range investigated was from 10 MHz to 10 GHz. See APPENDIX 1C for the test data.

The BlackBerry® smartphone met the requirements of the Conducted Spurious Emissions in the UMTS band 2 band as per 47 CFR 2.1057, CFR 24.238(a) and RSS-GEN, 4.9. The EUT was measured in Loopback and HSUPA mode on the low, middle and high channels. The frequency range investigated was from 10 MHz to 20 GHz.

See APPENDIX 1C for the test data.

j) The BlackBerry[®] smartphone met the requirements of the Occupied Bandwidth and channel mask in the UMTS band 5 as per 47 CFR 2.202, CFR 22.917 and RSS-GEN, 4.6. The channels were measured in Loopback and HSUPA mode on the low, middle and high channels. The worst case occupied bandwidth was 4.158 MHz on low and middle channels in Loopback and 4.158 MHz on low channel in HSUPA mode.

See APPENDIX 1C for the test data.

The BlackBerry[®] smartphone met the requirements of the Occupied Bandwidth and channel mask in the UMTS band 2 as per 47 CFR 2.202, CFR 24.238 and RSS-GEN, 4.6. The channels were measured in Loopback and HSUPA mode on the

low, middle and high channels. The worst case occupied bandwidth was 4.167 MHz on low, middle and high channels in Loopback and 4.175 MHz on low middle and high channels in HSUPA mode. See APPENDIX 1C for the test data.

k) The BlackBerry[®] smartphone met the requirements of the Tx Conducted RF output Power requirements in the UMTS band 5 as per 47 CFR 2.1046, and RSS-GEN, 4.4. The EUT was measured on the low, middle and high channels. See APPENDIX 2C for the test data.

The BlackBerry[®] smartphone met the requirements of the Tx Conducted RF output Power requirements in the UMTS band 2 as per 47 CFR 2.1046, and RSS-GEN, 6.4. The EUT was on the low, middle and high channels. See APPENDIX 2C for the test data.

I) The BlackBerry[®] smartphone met the requirements of the Frequency Stability requirements in the UMTS 5 as per 47 CFR 2.1055, CFR 22.917 and RSS-GEN, 4.3. The EUT was measured in UMTS band 5 mode on the low, middle and high channels.

See APPENDIX 3C for test data.

The BlackBerry[®] smartphone met the requirements of the Frequency Stability requirements in the UMTS 2 as per 47 CFR 2.1055, CFR 24.235 and RSS-GEN, 4.7. The EUT was measured in UMTS band 2 mode on the low, middle and high channels.

See APPENDIX 3C for test data.

2) Radiated Emission Measurements

a) Radiated Spurious and Harmonic Emissions

The radiated spurious emissions/harmonics and ERP/EIRP were measured for CDMA Cellular and CDMA PCS. The results are within the limits. The BlackBerry smartphone was placed on a nonconductive styrofoam table, 100 cm high that was positioned on a remotely controlled turntable. The test distance used between the BlackBerry smartphone and the receiving antenna was three metres. Then the emissions were maximized by elevating the antenna in the range of 1 to 4 metres. The turntable was rotated to determine the azimuth of the peak emissions. Both the horizontal and vertical polarizations of the emissions were measured. The maximum emissions level was recorded. The BlackBerry smartphone was then substituted with an antenna placed in the same location as the BlackBerry smartphone. A Dipole antenna was used for the ERP measurements and a Horn antenna was used for EIRP measurements. The substitution antenna was connected into a signal generator that was set to the test frequency.

The emissions were maximized by elevating the antenna in the range of 1 to 4 metres. The signal generator output was then adjusted to match the BlackBerry[®] smartphone output reading. The signal generator output was recorded. Both the horizontal and vertical polarizations of the emissions were measured.

The following measurements were done in a semi-anechoic chamber (SAC) below 1 GHz and a Semi-anechoic Chamber ((SAC) with floor absorber) above 1 GHz. The SAC's FCC registration number is **778487** and the Industry Canada (IC) file number is **2503B-1**. The SAC with floor absorber's FCC registration number is **959115** and the IC file number is **2503C-1**. The BlackBerry[®] smartphone was measured on the low, middle and high channels.

The following test configurations were measured for model RDU71CW:

The highest ERP measured in the Cellular band, Loopback Service mode, was 28.72 dBm (0.75 W) at 836.52 MHz (channel 384).

The highest ERP measured in the Cellular band, 1xEVDO mode, was 26.38 dBm (0.44 W) at 836.52 MHz (channel 384).

The highest EIRP measured in the PCS band, Loopback Service mode, was 27.82 dBm (0.61 W) at 1880.00 MHz (channel 600).

The highest EIRP measured in the PCS band, 1xEVDO mode, was 31.1 dBm (1.29 W) at 1880.00 MHz (channel 600)

Test Report No. RTS-3933-1105-43A

Dates of TestFeb 7 to March 22, May 6 to May 24 and June 14, 2011

FCC ID: L6ARDU70CW IC: 2503A-RDU70CW FCC ID: L6ARDE70UW IC: 2503A-RDE70UW

The radiated carrier harmonics were measured up to the 10th harmonic for low, middle and high channels in the Cellular and PCS. Each band was measured in Call, and EVDO modes, with both the horizontal and vertical polarizations.

The margins in the Cellular Call and EVDO for harmonic emissions were greater than 25 dB below the accepted limits for all test frequencies.

The margins in the PCS Call and EVDO for harmonic emissions were greater than 25 dB below the accepted limits for all test frequencies.

b) Co-Location Measurements

The radiated emissions were measured up to 18 GHz for middle channels for simultaneous transmission in the following test configuration combinations: CDMA CELL/Bluetooth/802.11b, CDMA PCS/Bluetooth/802.11g, GSM 850/Bluetooth/802.11g and PCS 1900/Bluetooth/802.11b. Both the horizontal and vertical polarizations were measured. The emissions due to different simultaneous transmission did not increase the amplitude of any emissions nor did it produce any new inter-modulation products as a result of mixing.

Sample Calculation:

Corrected Signal Level (CSL) is calculated as follows: CSL (dBm) = Measured Level (dB μ V) – Antenna Gain (dBi) + Free Space Loss (dB) – 107 (dB) + Cable Loss (dB) - Preamp (dB) + Filter Loss (dB) – 2.15 (dB)

To view the test data see APPENDIX 4.

Measurement Uncertainty ±4.6 dB

Test Report No. RTS-3933-1105-43A

Dates of TestFeb 7 to March 22, May 6 to May 24 and June 14, 2011

FCC ID: L6ARDU70CW IC: 2503A-RDU70CW FCC ID: L6ARDE70UW IC: 2503A-RDE70UW

GSM Conducted RF Emission Test Data cont'd

The conducted spurious emissions – As per 47 CFR 2.1051, CFR 24.238(a), RSS-GEN, 4.9, CFR 22 Subpart H and RSS-132 were measured from 10 MHz to 20 GHz. The EUT emissions were in the noise floor.

See figures 1-1a to 1-12a for the plots of the conducted spurious emissions.

-26 dBc Bandwidth and Occupied Bandwidth (99%)

For each carrier frequency of low, middle and high, the modulation spectrum was measured by both methods of 99% power bandwidth and –26 dBc bandwidth.

The resolution bandwidth required for out-of-band emissions in the 1 MHz bands immediately outside and adjacent to the frequency block, was determined to be at least 1% of the emission bandwidth.

The worst case –26dBc bandwidth for the GSM850 band was measured to be 270 kHz, and for the PCS1900 band was measured to be 278 kHz as shown below. This results in a 3.0 kHz resolution bandwidth.

On any frequency outside the frequency block and outside the adjacent 1 MHz bands, a resolution bandwidth of at least 1 MHz was applied.

Test Data for 850 band and 1900 band selected Frequencies in GSM mode.

850 band Frequency (MHz)	-26dBc Bandwidth (kHz)	99% Occupied Bandwidth (kHz)
824.2	270	245
837.6	263	245
848.8	270	246.7

1900 band Frequency (MHz)	-26dBc Bandwidth (kHz)	99% Occupied Bandwidth (kHz)
1850.2	277	245
1880.0	275	243.3
1909.8	278	243.3

Measurement Plots for 850 and 1900 in GSM mode

Refer to the following measurement plots for more detail.

See Figures 1-13a to 1-24a for the plots of 26dBc/99% Occupied Bandwidth.

The RF power output was at maximum for all the recorded measurements shown below.

Dates of TestFeb 7 to March 22, May 6 to May 24 and June 14, 2011

FCC ID: L6ARDU70CW IC: 2503A-RDU70CW FCC ID: L6ARDE70UW IC: 2503A-RDE70UW

CDMA Conducted RF Emission Test Data cont'd

The conducted spurious emissions – As per 47 CFR 2.1051, CFR 24.238(a), CFR 4.202, CFR 22 Subpart H, RSS-132 and RSS - 133 were measured from 10 MHz to 20 GHz.

See figures 1-1b to 1-12b for the plots of the conducted spurious emissions.

Date of Test: Feb 25, 2011

Test Data for Cellular and PCS selected Frequencies in Loopback mode

Cellular Frequency (MHz)	99% Occupied Bandwidth (MHz)
824.700	1.273
836.520	1.273
848.310	1.280

PCS Frequency (MHz)	99% Occupied Bandwidth (MHz)
1851.200	1.273
1880.000	1.280
1908.750	1.273

Test Data for Cellular and PCS selected Frequencies in Loopback mode Refer to the following measurement plots for more detail.

See Figures 1-1b to 1-12b for the plots of the conducted spurious emissions.

See Figures 1-13b to 1-18b for the plots of 99% Occupied Bandwidth.

See Figures 1-19b to 1-22b for the plots of the Channel mask.

The RF power output was at maximum for all the recorded measurements shown below.

GSM Conducted RF Output Power Test Data

The following test configurations were measured for model RDU71CW:

The conducted RF output power was measured on the BlackBerry[®] smartphone using the Communication Tester, Rohde & Schwarz, model CMU 200. The low, middle and high channels were measured at maximum output power. The insertion loss of the coaxial cable from the CMU 200 to the BlackBerry[®] smartphone was compensated for in the measurements.

Peak nominal output power is 32.5 dBm ±0.5 dB for GSM850 and 30.5 dBm ±0.5 dB for PCS.

Peak nominal output power is 29.5 dBm ± 0.5 dB for GSM850 EDGE Mode (2-timeslot uplink) and 29.0 dBm ± 0.5 dB for PCS EDGE Mode (2-timeslot uplink).

Date of Test: Feb 7, 2011

The environmental conditions were: Temperature:

Humidity: 30 %

23 °C

The measurements were performed by Daoud Attayi

Test Report No. RTS-3933-1105-43A	Dates of Test Feb 7 to March 22, May 6 to May 24 and June 14, 2011	FCC ID: L6ARDU70CW IC: 2503A-RDU70CW FCC ID: L6ARDE70UW IC: 2503A-RDE70UW				

Conducted RF Output Power Test Data

The following test configurations were measured for model RDU71CW:

The measurements were performed by Daoud Attayi.

The conducted RF output power was measured using the CDMA base station simulator. Low, middle and high channels were measured at maximum radio output power at different service options and modes.

Peak nominal output power is 24.50 dBm ±0.5 dB for Cellular and 23.50 dBm ±0.5 dB for PCS.

Date of Test: May 24, 2011

The environmental test conditions were: Temperature

23 °C

Relative Humidity 30%

GSM Frequency Stability Test Data

The following test configurations were measured for model RDU71CW:

The measurements were performed by Maurice Battler.

CFR 47 Chapter 1 - Federal Communications Commission Rules

Part 2 Required Measurements

2.995 Frequency Stability - Procedures

(a,b) Frequency Stability - Temperature Variation

(d) Frequency Stability - Voltage Variation

24.235/22.917 Frequency Stability.

The frequency stability shall be sufficient to ensure that the fundamental emission stays within the authorized frequency block.

The EUT meets the requirements as stated in CFR 47 chapter 1, Section 24.235, CFR 47 chapter 1, Section 22.917 RSS-132, 4.3 Frequency Stability, and RSS-133, 6.3 Frequency Stability.

Frequency Stability measurement devices were configured as presented in the block diagram recording frequency, power, data, temperatures, and stepped voltages controlled via a GPIB interface linked to the Environmental chamber, a DC power supply, and the Communications Test Set. A 0.9-metre coax cable was calibrated to characterize the insertion loss for the transmitted frequencies between the RF input/output of the CMU 200 and the EUT antenna port.

This report shall <u>NOT</u> be reproduced except in full without the written consent of RIM Testing Services - A division of Research in Motion Limited.

Copyright 2005-2011 Page 75 of 117

Test Report No. RTS-3933-1105-43A

Dates of TestFeb 7 to March 22, May 6 to May 24 and June 14, 2011

FCC ID: L6ARDU70CW IC: 2503A-RDU70CW
FCC ID: L6ARDE70UW IC: 2503A-RDE70UW

Calibration for the Cable Loss was performed in the RF Laboratory using the Agilent power meter and Agilent Signal Generator.

Procedure:

The EUT was placed in the Temperature chamber and connected to CMU 200 outside as shown in the figure above. Dry air was pumped inside the temperature chamber to maintain a backpressure during the test. The EUT was kept in the off condition at all times except when the measurements were to be made.

The chamber was switched on and the temperature was set to -30°C.

After the chamber stabilized at -30 °C there was a soak period of one hour to alleviate moisture in the chamber, the EUT voltage was enabled.

The system software recorded the frequency, power, and associated measurements.

A Computer system controlled the automated software. This application was given the command of activating all machines intrinsic to the temperature and voltage tests controlling the CMU 200 via the GPIB Bus. The Environmental Chamber was instructed through an RS-232 serial line. The EUT dialogue was passed through a serial connection.

The EUT repetitively transmitted 100 bursts for each set of programmed parameters recording temperature, voltage settings, and systematically selected frequencies. The power supply was cycled from minimum voltage 3.6 volts, to 3.7 volts to 4.2 volts maximum voltage. The frequency error was measured at a maximum output power and recorded by the automated system test software.

The EUT output power and frequency was measured at 3.6 volts, 3.7 volts and 4.2 volts. The transmit frequency was varied in 3 steps consisting of 824.2, 836.4, and 848.8 MHz for the GSM850 band, 1850.2, 1880.0 and 1909.8 MHz for the PCS1900 band. This frequency was recorded in MHz and deviation from nominal, in Parts Per Million.

After the initial one-hour soak at the beginning of the tests, a period of thirty minutes soak was initialized between each ascending temperature step, before proceeding to the next measurement test cycle.

Test Report No. RTS-3933-1105-43A

Dates of TestFeb 7 to March 22, May 6 to May 24 and June 14, 2011

FCC ID: L6ARDU70CW IC: 2503A-RDU70CW
FCC ID: L6ARDE70UW IC: 2503A-

RDE70UW

PROCEDURE:

The test system software for commencing the Frequency Stability Tests carried through the following cycle.

- Switch on the HP 6632B power supply; CMU 200 Communications test Set, and Environmental Chamber.
- 2. Start test program
- 3. Set the Temperature to -30°C and maintain a period of one- hour soak time, with the EUT supply voltage disabled.
- 4. Set power supply voltage to 3.6 volts.
- 5. Set up CMU 200 Radio Communication Tester.
- 6. Command the CMU 200 to switch to the low channel.
- 7. Enable the voltage to the EUT, and connect a link to the CMU 200 test set.
- 8. EUT is commanded to Transmit 100 Bursts.
- 9. Software logs the following data from the CMU 200, power supply and temperature chamber: Traffic Channel Number, Traffic Channel Frequency, Power Level, Chamber Temperature, Supply Voltage, Power and Frequency Error.
- 10. The CMU 200 commands the EUT to change frequency to the middle channel and high channel and repeats steps 7 to 9.
- 11. Repeat steps 5 to 10 changing the supply voltage to 3.7 Volts
- 12. Increase temperature by 10°C and soak for 1/2 hour.
- 13. Repeat steps 4 12 for temperatures –30°C to 60°C.
- 14. Repeat steps 5 to 10 changing the supply voltage to 4.2 volts

Procedure 5 to 10 was repeated at room temperature (20°C) with the power supply voltage set to 3.6, 3.7 and 4.2 volts.

The maximum frequency error in the GSM850 band measured was **0.0277 PPM**. The maximum frequency error in the PCS1900 band measured was **0.0319 PPM**.

Testing Services	EMI Test Report for the BlackBerry® smartphone Model RDU71CW RDE71UW APPENDIX 3B			
Test Report No. RTS-3933-1105-43A	Dates of Test Feb 7 to March 22, May 6 to May 24 and June 14, 2011	FCC ID: L6ARDU70CW IC: 2503A-RDU70CW FCC ID: L6ARDE70UW IC: 2503A-RDE70UW		

CDMA Frequency Stability Test Data

The following test configurations were measured for model RDU71CW:

CFR 47 Chapter 1 - Federal Communications Commission Rules

Part 2 Required Measurements

2.1055 Frequency Stability - Procedures

- (a,b) Frequency Stability Temperature Variation
- (d) Frequency Stability Voltage Variation

22.917/24.235 Frequency Stability.

The frequency stability shall be sufficient to ensure that the fundamental emission stays within the authorized frequency block.

The RCU21CW BlackBerry® smartphone, (referred as EUT herein and after) transmitted frequencies are less than 0.1 ppm of the received frequency from the Agilent 8960 CDMA Base Station Simulator

The EUT meets the requirements as stated in CFR 47 chapter 1, Section 24.235, RSS-133, CFR 47 chapter 1, Section 22.917 and RSS-132 Frequency Stability.

Frequency Stability measurement devices were configured as presented in the block diagram recording frequency, power, data, temperatures, and stepped voltages controlled via a GPIB interface linked to the Environmental chamber, a DC power supply, and the Communications Test Set. A 0.9-metre coax cable was calibrated to characterize the

This report shall <u>NOT</u> be reproduced except in full without the written consent of RIM Testing Services - A division of Research in Motion Limited.

insertion loss for the transmitted frequencies between the RF input/output of the baste station simulator and the EUT antenna port; located inside the environmental chamber.

Calibration for the Cable Loss was performed in the RF Laboratory using the Giga-tronics power metre and Agilent Signal Generator.

The cable assembly from the RF input to the RF output was measured at the following Frequencies:

PCS Frequency (MHz)	Cable loss (dB)
1851.20	1.10
1880.00	1.10
1908.75	1.10

Cellular Frequency (MHz)	Cable loss (dB)
824.70	0.50
836.52	0.50
848.31	0.50

Procedure:

The EUT was placed in the Temperature chamber and connected to the Agilent 8960 outside as shown in the figure above. Dry air was pumped inside the temperature chamber to maintain a backpressure during the test. The EUT was kept in the off condition at all times except when the measurements were to be made.

The chamber was switched on and the temperature was set to -30°C.

After the chamber stabilized at -30 °C there was a soak period of one hour to alleviate moisture in the chamber, the EUT voltage was enabled.

The system software recorded the frequency, power, and associated measurements.

A Computer system controlled the automated software. This application was given the command of activating all machines intrinsic to the temperature and voltage tests controlling the base station simulator via the GPIB Bus. The Environmental Chamber was instructed through an RS-232 serial line. The EUT dialogue was passed through a serial connection.

The EUT repetitively transmitted 100 bursts for each set of programmed parameters recording temperature, voltage settings, and systematically selected frequencies. The power supply was cycled from minimum voltage 3.6 volts, to 3.7 volts nominal voltage to 4.2 volts maximum voltage. The frequency error was measured at a maximum output power and recorded by the automated system test software.

The EUT output power and frequency was measured at 3.6 volts, 3.7 volts and 4.2 volts. The transmit frequency was varied in 3 steps consisting of 824.70, 836.52, and 848.31 MHz for the cellular band and 1851.20, 1880.00 and 1908.75 MHz for the PCS band. This frequency was recorded in MHz and deviation from nominal, in Parts per Million.

Test Report No. RTS-3933-1105-43A **Dates of Test** Feb 7 to March 22, May 6 to May 24 and June 14, 2011

FCC ID: L6ARDU70CW IC: 2503A-RDU70CW FCC ID: L6ARDE70UW IC: 2503A-RDE70UW

PROCEDURE:

The test system software for commencing the Frequency Stability Tests carried through the following cycle.

- Switch on the HP 6632B power supply; CMU 200 Communications test Set, and 1. Environmental Chamber.
- 2. Start test program
- Set the Temperature to -30°C and maintain a period of one- hour soak time, with the 3. EUT supply voltage disabled.
- Set power supply voltage to 3.6 volts. 4.
- Set up CMU 200 Radio Communication Tester. 5.
- Command the CMU 200 to switch to the low channel. 6.
- Enable the voltage to the EUT, and connect a link to the CMU 200 test set. 7.
- EUT is commanded to Transmit 100 Bursts. 8.
- Software logs the following data from the CMU 200, power supply and temperature chamber: Traffic Channel Number, Traffic Channel Frequency, Power Level, Chamber Temperature, Supply Voltage, Power and Frequency Error.
- 10. The CMU 200 commands the EUT to change frequency to the middle channel and high channel and repeats steps 7 to 9.
- 11. Repeat steps 5 to 10 changing the supply voltage to 3.7 Volts
- 12. Increase temperature by 10°C and soak for 1/2 hour.
- 13. Repeat steps 4 12 for temperatures –30°C to 60°C.
- 14. Repeat steps 5 to 10 changing the supply voltage to 4.2 volts

Procedure 5 to 10 was repeated at room temperature (20°C) with the power supply voltage set to 3.6, 3.7 and 4.2 volts

The maximum frequency error in the CDMA Cellular band measured was **-0.0717 PPM**. The maximum frequency error in the CDMA PCS band measured was -0.0394 PPM.

Test Report No. RTS-3933-1105-43A

Dates of Test

Feb 7 to March 22, May 6 to May 24 and June 14, 2011

FCC ID: L6ARDU70CW IC: 2503A-RDU70CW FCC ID: L6ARDE70UW IC: 2503A-RDE70UW

UMTS Frequency Stability Test Data

The following test configurations were measured for model RDE71UW:

The following measurements were performed by Maurice Battler.

CFR 47 Chapter 1 - Federal Communications Commission Rules

Part 2 Required Measurements

- **2.1055** Frequency Stability Procedures
- (a,b) Frequency Stability Temperature Variation
- (d) Frequency Stability Voltage Variation

24.235 Frequency Stability.

The frequency stability shall be sufficient to ensure that the fundamental emission stays within the authorized frequency block.

The EUT meets the requirements as stated in CFR 47 chapter 1, Section 27.54, CFR 47 and RSS-139, 6.3 Frequency Stability.

Frequency Stability measurement devices were configured as presented in the block diagram recording frequency, power, data, temperatures, and stepped voltages controlled via a GPIB interface linked to the Environmental chamber, a DC power supply, and the Communications Test Set. A 0.9-metre coax cable was calibrated to characterize the insertion loss for the transmitted frequencies between the RF input/output of the CMU 200 and the EUT antenna port.

This report shall <u>NOT</u> be reproduced except in full without the written consent of RIM Testing Services - A division of Research in Motion Limited.

Test Report No. RTS-3933-1105-43A

Dates of Test Feb 7 to March 22, May 6 to May 24

and June 14, 2011

FCC ID: L6ARDU70CW IC: 2503A-RDU70CW FCC ID: L6ARDE70UW IC: 2503A-RDE70UW

Procedure:

The EUT was placed in the Temperature chamber and connected to CMU 200 outside as shown in the figure above. Dry air was pumped inside the temperature chamber to maintain a backpressure during the test. The EUT was kept in the off condition at all times except when the following measurements were to be made.

The chamber was switched on and the temperature was set to -30°C.

After the chamber stabilized at -30 °C there was a soak period of one hour to alleviate moisture in the chamber, the EUT voltage was enabled.

The system software recorded the frequency, power, and associated measurements.

A Computer system controlled the automated software. This application was given the command of activating all machines intrinsic to the temperature and voltage tests controlling the CMU 200 via the GPIB Bus. The Environmental Chamber was instructed through an RS-232 serial line. The EUT dialogue was passed through a serial connection.

The EUT repetitively transmitted 100 bursts for each set of programmed parameters recording temperature, voltage settings, and systematically selected frequencies. The power supply was cycled from minimum voltage 3.6 volts, to 3.7 volts to 4.2 volts maximum voltage. The frequency error was measured at a maximum output power and recorded by the automated system test software.

The EUT output power and frequency was measured at 3.6 volts, 3.7 volts and 4.2 volts. The transmit frequency was varied in 3 steps consisting of 1852.4, 1880.0 and 1907.6 MHz for the UMTS band 2. This frequency was recorded in MHz and deviation from nominal, in Parts Per Million.

After the initial one-hour soak at the beginning of the tests, a period of thirty minutes soak was initialized between each ascending temperature step, before proceeding to the next measurement test cycle.

Test Report No. RTS-3933-1105-43A

Dates of Test

Feb 7 to March 22, May 6 to May 24 and June 14, 2011

FCC ID: L6ARDU70CW IC: 2503A-RDU70CW FCC ID: L6ARDE70UW IC: 2503A-RDE70UW

PROCEDURE:

The test system software for commencing the Frequency Stability Tests carried through the following cycle.

- 15. Switch on the HP 6632B power supply; CMU 200 Communications test Set, and Environmental Chamber.
- 16. Start test program
- 17. Set the Temperature to -30°C and maintain a period of one- hour soak time, with the EUT supply voltage disabled.
- 18. Set power supply voltage to 3.6 volts.
- 19. Set up CMU 200 Radio Communication Tester.
- 20. Command the CMU 200 to switch to the low channel.
- 21. Enable the voltage to the EUT, and connect a link to the CMU 200 test set.
- 22. EUT is commanded to Transmit 100 Bursts.
- 23. Software logs the following data from the CMU 200, power supply and temperature chamber: Traffic Channel Number, Traffic Channel Frequency, Power Level, Chamber Temperature, Supply Voltage, Power and Frequency Error.
- 24. The CMU 200 commands the EUT to change frequency to the middle channel and high channel and repeats steps 7 to 9.
- 25. Repeat steps 5 to 10 changing the supply voltage to 3.7 Volts
- 26. Increase temperature by 10°C and soak for 1/2 hour.
- 27. Repeat steps 4 12 for temperatures -30°C to 60°C.
- 28. Repeat steps 5 to 10 changing the supply voltage to 4.2 volts

Procedure 5 to 10 was repeated at room temperature (20°C) with the power supply voltage set to 3.6, 3.7 and 4.2 volts

The maximum frequency error in the UMTS band 5 measured was **-0.0402 PPM**. The maximum frequency error in the UMTS band 2 measured was **0.0330 PPM**.

Radiated Power Test Data Results

The following test configurations were measured for model RDU71CW:

Date of Test: May 06, 2011

The following measurements were performed by Quan (Jerry) Ma.

The environmental tests conditions were: Temperature:

23.2 °C

Relative Humidity:

30.2%

The BlackBerry[®] smartphone - was in standalone, USB up position. Test distance is 3.0 metres

Cellular Loopback Service Mode

Date of Test: May 6, 2011

The following measurements were performed by Quan (Jerry) Ma

The environmental test conditions were: Temperature: 24.1 °C

Relative Humidity: 29.3 %

Test Distance was 3.0 metres with a height of 1-4 metres, and a frequency range of 30 MHz to 1000 MHz.

The BlackBerry® smartphone was in standalone, Vertical position.

The following measurements were performed in CDMA Cellular Loopback Tx mode on channels 1013, 384 and 777.

All emissions had a test margin greater than 25.0 dB.

Date of Test: March 16, 2011

The following measurements were performed by Adam Rusinek

The environmental test conditions were: Temperature: 26.0°C

Relative Humidity: 33.6 %

Test Distance was 3.0 metres with a height of 1-4 metres, and a frequency range of 1-9GHz.

The BlackBerry® smartphone was in standalone, Vertical position.

The following measurements were performed in CDMA Cellular Loopback Tx mode on channels 1013, 384 and 777.

All emissions had a test margin greater than 25.0 dB.
