RE: Wireless Computing

FCC ID: L7MR170

I have a few comments on this Application. Depending on your responses, kindly understand there may be additional comments.

- 1.) Your revised Block Diagram contains no details on what is within the RF transceiver. As such, we still have no understanding as to how this device creates, modulates, or amplifies RF energy. Ideally, the Block Diagram can be used in conjunction with the schematic to understand how the RF circuit portion of this device operates. At minimum, I expect to see and understand the RF oscillators and amplifiers used within the device.
- 2.) Your response to my question #6.) of September 29, 2007 indicates that the 15.19(a)(3) statement can be found within the Manual. This is not found. Ideally the 15.19(a)(3) statement should be on the device itself. However, in cases where the device is too small it is permitted to place the text within the Manual. Please review your response and 47CFR 15.19(a)(3) for the correct language.
- 3.) The Manual also makes reference to use of "modules". Kindly note that this filing will not create any sort of "modular approval" for your client – each individual product will need to be separately Certificated. Be cautious in the use of the word "module".

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information may result in application termination. Correspondence should be considered part of the permanent submission and may be viewed from the Internet after a Grant of Equipment Authorization is issued.

Please do not respond to this correspondence using the email reply button. In order for your response to be processed expeditiously, you must submit your documents through the AmericanTCB.com website. Also, please note that partial responses increase processing time and should not be submitted.

Any questions about the content of this correspondence should be directed to the sender.
