RE: LANTECH Advance Corporation
FCC ID: L8G8800002

Dear Dennis:

After the review of your comments, we have made some response upon your advice, are summarized as follows:

1. Those 5 documents aren't having any Chinese character but anyway I have re-do the conversion of the document by the Acrobat Distiller and it will be expected to work for the problem you'd encountered.
2. Referring to the diversity of the antennas, these any possibility of using any other antennas are not applied to this model but maybe for the other model to be manufactured in the future based on the same PCB of the model we are applying. The manufacturer, LANTECH Advance Corp., claims that if these any other model with those modifications will be apply separately in the future.
3. The label is already shown the FCC ID and comply with the 2.925; Regarding to the remarks of 15.19, the label will be modified as the uploads.
4. Please find the file uploaded.
5. The pages about the Power Spectral Density is modified, please find it in the uploads

Should you have any questions, please don't hesitate to ask us.

Sincerely yours,
Eric Wong
Project Engineer
Training Research Co Ltd.
